Chemical Reactor Technology for Environmentally Safe Reactors and Products Hugo de Lasa, G. Dogammau, A. Ravella, 2012-12-06 Chemical reactor engineering as a discipline has a central role to play in helping with the development of adequate strategies and technologies that can deal effectively with the concerns of today's society which are increasingly becoming attuned to the environment. The current challenge is how to adapt present processes and products to meet more rigorous environmental standards. *Chemical Reactor Technology for Environmentally Safe Reactors and Products* addresses these issues in three parts: I Fuels of the Future and Changing Fuel Needs; II Alternative Sources; III Emission Control. Chemical Reactor Safety and Engineering Attention is also paid throughout the text to the fundamental technological aspects of reactor engineering and to possible strategies for bridging knowledge gaps. *Reaction Kinetics and the Development of Catalytic Processes* G.F. Froment, K.C. Waugh, 1999-03-18 The symposium *Reaction Kinetics and the Development of Catalytic Processes* is the continuation of the very successful International Symposium Dynamics of Surfaces and Reaction Kinetics in Heterogeneous Catalysis held in September 1997 in Antwerp, Belgium. These proceedings contain a unique series of top level plenary lectures mainly focused on the dynamics of catalytic surfaces, the interaction of the reacting molecules with the solid catalyst, the elementary steps of reaction pathways and molecular kinetics. Surface science techniques, molecular modeling, transient kinetic studies, sophisticated and specific reactors are included to a growing extent in the kinetic modeling and the development of catalytic processes. How this is practiced today and how it will evolve in the coming years and what benefit can be expected for a more fundamentally based approach is the aim of the symposium. **Industrial Organic Chemistry** Klaus Weissermel, Hans-Jürgen Arpe, 2003 Publisher Description **Catalysis** James J Spivey, Sanjay K Agarwal, 2007-10-31 There is an increasing challenge for chemical industry and research institutions to find cost efficient and environmentally sound methods of converting natural resources into fuels, chemicals and energy. Catalysts are essential to these processes and the *Catalysis Specialist Periodical Report* series serves to highlight major developments in this area. This series provides systematic and detailed reviews of topics of interest to scientists and engineers in the catalysis field. The coverage includes all major areas of heterogeneous and homogeneous catalysis and also specific applications of catalysis such as NO_x control, kinetics and experimental techniques such as microcalorimetry. Each chapter is compiled by recognised experts within their specialist fields and provides a summary of the current literature. This series will be of interest to all those in academia and industry who need an up to date critical analysis and summary of catalysis research and applications. *Catalysis* will be of interest to anyone working in academia and industry that needs an up to date critical analysis and summary of catalysis research and applications. *Specialist Periodical Reports* provide systematic and detailed review coverage in major areas of chemical research. Compiled by teams of leading experts in their specialist fields, this series is designed to help the chemistry community keep current with the latest developments in their field. Each volume in the series is published either annually or

biennially and is a superb reference point for researchers www.rsc.org/spr **Chemical Technologies and Processes** Katarzyna Staszak, Karolina Wieszczycka, Bartosz Tylkowski, 2020-07-20 This book is essential reading for scientists and students interested in both organic and inorganic chemical technology The authors cover the production of chemical reagents as well as trends from adjacent fields including biotechnology and process simulation Chemical Technologies and Processes is of interest to chemical engineers materials scientists as well as chemists in both academia and industry

Metal Oxide Catalysis, 2 Volume Set S. David Jackson, Justin S. J. Hargreaves, 2008-11-24 With its two volume structure this handbook and ready reference allows for comprehensive coverage of both characterization and applications while uniform editing throughout ensures that the structure remains consistent The result is an up to date review of metal oxides in catalysis The first volume covers a range of techniques that are used to characterize oxides with each chapter written by an expert in the field Volume 2 goes on to cover the use of metal oxides in catalytic reactions For all chemists and engineers working in the field of heterogeneous catalysis **The Changing Landscape of Hydrocarbon Feedstocks for Chemical Production** National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Chemical Sciences and Technology, 2016-11-10 A decade ago the U S chemical industry was in decline Of the more than 40 chemical manufacturing plants being built worldwide in the mid 2000s with more than 1 billion in capitalization none were under construction in the United States Today as a result of abundant domestic supplies of affordable natural gas and natural gas liquids resulting from the dramatic rise in shale gas production the U S chemical industry has gone from the world's highest cost producer in 2005 to among the lowest cost producers today The low cost and increased supply of natural gas and natural gas liquids provides an opportunity to discover and develop new catalysts and processes to enable the direct conversion of natural gas and natural gas liquids into value added chemicals with a lower carbon footprint The economic implications of developing advanced technologies to utilize and process natural gas and natural gas liquids for chemical production could be significant as commodity intermediate and fine chemicals represent a higher economic value use of shale gas compared with its use as a fuel To better understand the opportunities for catalysis research in an era of shifting feedstocks for chemical production and to identify the gaps in the current research portfolio the National Academies of Sciences Engineering and Medicine conducted an interactive multidisciplinary workshop in March 2016 The goal of this workshop was to identify advances in catalysis that can enable the United States to fully realize the potential of the shale gas revolution for the U S chemical industry and as a result to help target the efforts of U S researchers and funding agencies on those areas of science and technology development that are most critical to achieving these advances This publication summarizes the presentations and discussions from the workshop **Integrated Chemical Processes** Kai Sundmacher, Achim Kienle, Andreas Seidel-Morgenstern, 2006-03-06 This is the first book dedicated to the entire field of integrated chemical processes covering process design analysis operation and control of these processes Both the editors

and authors are internationally recognized experts from different fields in industry and academia and their contributions describe all aspects of intelligent integrations of chemical reactions and physical unit operations such as heat exchange separational operations and mechanical unit operations As a unique feature the book also introduces new concepts for treating different integration concepts on a generalized basis Of great value to a broad audience of researchers and engineers from industry and academia
