## Operation

To operate the bale sector cylinder or the bale shift cylinder, the bale control console must energize the open center solenoid valve. The open center solenoid valve closes the passage to port 1. Pressurized oil is now available at port 4 of auxiliary solenoid valve A.

To move the sector from the home position or to shift a bale to the left-hand side cart, auxiliary solenoid valves A and B are energized. The high pressure oil flows into port 4 and out port 5 of auxiliary solenoid valve A. The oil then flows through a passage to auxiliary solenoid valve B. The oil flows into port 5 and out port 4 of auxiliary solenoid valve B and on to port C of the sector cylinder.

If equipped with a sector cylinder, the oil flows from port C of the sector cylinder to the end of the bale sector cylinder. The bale sector cylinder retracts to move the sector from the home position.

If equipped with an accumulator, the oil flows from port C of the sector cylinder to the end of the bale shift cylinder. The bale shift cylinder extends to move the bale from the center of the accumulator to the left-hand side cart.

Return oil from the bale sector cylinder or the bale shift cylinder flows into port C of the sector cylinder and out port 5 of auxiliary solenoid valve A and into the bale control valve. The oil flows through the bale control valve and out port 7 to the tank.

## MAIN HYDRAULIC SYSTEM

### Fill and Charge

Engage the PTO on the power unit and run the loader at no more than 500 rpm on the PTO.

Apply 12 volts (DC) to increase the solenoid and put the line under pressure. Fill until oil is sent from the system at the hydraulic fittings.

NOTE: 12 volts can be supplied by the GDS Console for:

- Hook up the GDS Console to the main wiring harness.
- Press the Manual Pressure Button to go to the manual control screen.
- Press "1" button to apply 12 V to increase the solenoid.
- Press "1" button to apply 12 V to decrease the solenoid.

Turn off the PTO and Power Unit.

Cycle the Bale Density a maximum of 3 times and make sure all of the air is purged from the system.

Then fill the reservoir.
