Use the following for questions 4-6:

In dogs, there is an hereditary deafness caused by a recessive allele, "d." A kennel owner has a male dog (Gilbert) that she wants to use for breeding purposes if possible. The dog can hear.

4) What are the two possible genotypes of Gilbert?

5) If the dog's carries the deaf (d) allele, the owner does not wish to use him for breeding so that the deafness gene will not be passed on. This can be tested by breeding the dog to a deaf female (dd). Draw two Punnett squares to illustrate these two possible crosses.

6) In each case, what fraction of the offspring would be expected to be hearing? deaf? How could you tell the genotype of this male dog? Also, using Punnett square(s), show how two hearing dogs could produce deaf offspring.
