Elliptic-Hyperbolic Partial Differential Equations Thomas H. Otway,2015-07-08 This text is a concise introduction to the partial differential equations which change from elliptic to hyperbolic type across a smooth hypersurface of their domain These are becoming increasingly important in diverse sub fields of both applied mathematics and engineering for example The heating of fusion plasmas by electromagnetic waves The behaviour of light near a caustic Extremal surfaces in the space

of special relativity The formation of rapids transonic and multiphase fluid flow The dynamics of certain models for elastic structures The shape of industrial surfaces such as windshields and airfoils Pathologies of traffic flow Harmonic fields in extended projective space They also arise in models for the early universe for cosmic acceleration and for possible violation of causality in the interiors of certain compact stars Within the past 25 years they have become central to the isometric embedding of Riemannian manifolds and the prescription of Gauss curvature for surfaces topics in pure mathematics which themselves have important applications Elliptic Hyperbolic Partial Differential Equations is derived from a mini course given at the ICMS Workshop on Differential Geometry and Continuum Mechanics held in Edinburgh Scotland in June 2013 The focus on geometry in that meeting is reflected in these notes along with the focus on quasilinear equations In the spirit of the ICMS workshop this course is addressed both to applied mathematicians and to mathematically oriented engineers The emphasis is on very recent applications and methods the majority of which have not previously appeared in book form

Effectiveness of teachers' guides in the Global South Benjamin Piper,Yasmin Sitabkhan,Jessica Mejia,Kellie Betts,2018-05-10 This report presents the results of RTI International Education s study on teachers guides across 13 countries and 19 projects Using quantitative and qualitative methods we examine how teachers guides across the projects differ and find substantial variation in the design and structure of the documents We develop a scripting index so that the scripting levels of the guides can be compared across projects The impact results of the programs that use teachers guides show significant impacts on learning outcomes associated with approximately an additional half year of learning showing that structured teachers guides contribute to improved learning outcomes During observations we find that teachers make a variety of changes in their classroom instruction from how the guides are written showing that the utilization of structured teachers guides do not create robotic teachers unable to use their own professional skills to teach children Unfortunately many changes that teachers make reduce the amount of group work and interactivity that was described in the guides suggesting that programs should encourage teachers to more heavily utilize the instructional routines designed in the guide The report includes a set of research based guidelines that material developers can use to develop teachers guides that will support effective instructional practices and help improve learning outcomes The key takeaway from the report is that

structured teachers guides improve learning outcomes but that overly scripted teachers guides are somewhat less effective than simplified teachers guides that give specific guidance to the teacher but are not written word for word for each lesson in the guide
