**The Schenley Experiment** Jake Oresick,2017-04-14 The Schenley Experiment is the story of Pittsburgh s first public high school a social incubator in a largely segregated city that was highly even improbably successful throughout its 156 year existence Established in 1855 as Central High School and reorganized in 1916 Schenley High School was a model of innovative public education and an ongoing experiment in diversity Its graduates include Andy Warhol actor Bill Nunn and jazz virtuoso Earl Hines and its prestigious academic program and pensions lured such teachers as future Pulitzer Prize winner Willa Cather The subject of investment as well as destructive neglect the school reflects the history of the city of Pittsburgh and provides a study in both the best and worst of urban public education practices there and across the Rust Belt Integrated decades before Brown v Board of Education Schenley succumbed to default segregation during the white flight of the 1970s it rose again to prominence in the late 1980s when parents camped out in six day long lines to enroll their children in visionary superintendent Richard C Wallace s reinvigorated school

Although the historic triangular building was a cornerstone of its North Oakland neighborhood and a showpiece for the city of Pittsburgh officials closed the school in 2008 citing over 50 million in necessary renovations a controversial event that captured national attention Schenley alumnus Jake Oresick tells this story through interviews historical documents and hundreds of first person accounts drawn from a community indelibly tied to the school A memorable important work of local and educational history his book is a case study of desegregation magnet education and the changing nature and legacies of America's oldest public schools

A Homology Theory for Smale Spaces Ian F. Putnam, 2014-09-29 The author develops a homology theory for Smale spaces which include the basics sets for an Axiom A diffeomorphism It is based on two ingredients The first is an improved version of Bowen's result that every such system is the image of a shift of finite type under a finite to one factor map The second is Krieger's dimension group invariant for shifts of finite type He proves a Lefschetz formula which relates the number of periodic points of the system for a given period to trace data from the action of the dynamics on the homology groups The existence of such a theory was proposed by Bowen in the 1970s

Learning in the Fast Lane Chester E. Finn, Jr., Andrew E. Scanlan, 2021-05-11 More than three million high school students take five million Advanced Placement exams each May yet remarkably little is known about how this sixty year old privately run program has become one of U S education's greatest successes From its mid century origin as a tiny option for privileged kids from posh schools AP has also emerged as a booster rocket into college for hundreds of thousands of disadvantaged youngsters It challenges smart kids affects school ratings affords rewarding classroom challenges to great teachers tunes up entire schools and draws vast support from philanthropists education reformers and policymakers AP stands as America's foremost source of college level academics for high school pupils Praised for its rigor and integrity more than 22 000 schools now offer some or many of its thirty eight subjects from Latin to calculus art to computer science But challenges abound today as AP faces stiffening competition especially dual credit curriculum wars charges of elitism misgivings by elite schools and universities and the arduous work of infusing rigor into schools that lack it and academic success into young people unaccustomed to it In today's polarized climate can Advanced Placement maintain its lofty standards and overcome the hostility politics and despair that have sunk so many other bold education ventures Advanced Placement The Unsung Success Story of American Education is a unique account richly documented and thoroughly readable of the AP program in all its strengths and travails written by two of America's most respected education analysts

The Turing Guide Jack Copeland, Jonathan Bowen, Mark Sprevak, Robin Wilson, 2017-02-16 Alan Turing has long proved a subject of fascination but following the centenary of his birth in 2012 the code breaker computer pioneer mathematician and much more has become even more celebrated with much media coverage and several meetings conferences and books raising public awareness of Turing's life and work This volume will bring together contributions from some of the leading experts on Alan Turing to create a comprehensive guide to Turing that will serve as a useful resource for researchers in the area as well as the

increasingly interested general reader The book will cover aspects of Turing's life and the wide range of his intellectual activities including mathematics, code breaking, computer science, logic, artificial intelligence, and mathematical biology, as well as his subsequent influence

**Proof of the 1-Factorization and Hamilton Decomposition Conjectures** Béla Csaba, Daniela Kühn, Allan Lo, Deryk Osthus, Andrew Treglown, 2016-10-05 In this paper the authors prove the following results via a unified approach for all sufficiently large  $n$ :

- 1 factorization conjecture Suppose that  $n$  is even and  $D \geq \frac{n}{4} + 1$ . Then every  $D$ -regular graph  $G$  on  $n$  vertices has a decomposition into perfect matchings.
- Equivalently,  $G$  has a Hamilton decomposition.
- Suppose that  $D \geq \frac{n}{2}$ . Then every  $D$ -regular graph  $G$  on  $n$  vertices has a decomposition into Hamilton cycles and at most one perfect matching.
- Optimal packings of Hamilton cycles Suppose that  $G$  is a graph on  $n$  vertices with minimum degree  $\geq \frac{n}{2}$ . Then  $G$  contains at least  $\frac{2}{n-2} \delta(G)$  edge-disjoint Hamilton cycles. Here  $\delta(G)$  denotes the degree of the largest even regular spanning subgraph one can guarantee in a graph on  $n$  vertices with minimum degree  $\geq \frac{n}{2}$ .

These results were first explicitly stated by Chetwynd and Hilton. (ii) and the special case  $\frac{n}{2}$  of (iii) answer questions of Nash-Williams from 1970. All of the above bounds are best possible.

**Equivalence** Amanda L. Golbeck, 2017-04-28 Equivalence Elizabeth L. Scott at Berkeley is the compelling story of one pioneering statistician's relentless twenty-year effort to promote the status of women in academe and science. Part biography and part microhistory, the book provides the context and background to understand Scott's masterfulness at using statistics to help solve societal problems. In addition to being one of the first researchers to work at the interface of astronomy and statistics and an early practitioner of statistics using high-speed computers, Scott worked on an impressively broad range of questions in science, from whether cloud seeding actually works to whether ozone depletion causes skin cancer. Later in her career, Scott became swept up in the academic women's movement. She used her well-developed scientific research skills together with the advocacy skills she had honed in such activities as raising funds for Martin Luther King Jr. and keeping Free Speech Movement students out of jail toward policy making that would improve the condition of the academic workforce for women. The book invites the reader into Scott's universe, a window of inspiration made possible by the fact that she saved and dated every piece of paper that came across her desk.

**Failure Up Close** Jay P. Greene, Michael Q. McShane, 2018-01-17 For many reasons, failure in education reform is rarely admitted. Even though it is incredibly hard work to try and improve the enormous and diverse American education system because there are political consequences of admitting that a particular effort did not live up to its promises and pressure from philanthropic funders to show success, unsuccessful efforts are often swept under the rug or papered over with public relations efforts that avoid wrestling with the tough realities of educational improvement. This doesn't help anyone. As any educator will tell you, failure is an essential part of learning. Insofar as education reform needs to be a learning movement itself, it has to be able to admit where it has failed and learn from it. Failure Up Close engages a select group of scholars from across the ideological spectrum to examine particular education reform efforts of recent years that have not succeeded and offer lessons for school

and system improvement that can be learned from them Rather than view failure as negative this volume looks at failure as an opportunity to learn and grow In fact the editors endeavored to find authors that would analyze reforms for which they had some fundamental sympathy The goal is not to bash particular efforts or castigate their supporters but rather to help those supporters understand how to do what they do better and ultimately do better for children

**On the Differential Structure of Metric Measure Spaces and Applications** Nicola Gigli, 2015-06-26 The main goals of this paper are i To develop an abstract differential calculus on metric measure spaces by investigating the duality relations between differentials and gradients of Sobolev functions This will be achieved without calling into play any sort of analysis in charts our assumptions being the metric space is complete and separable and the measure is Radon and non negative ii To employ these notions of calculus to provide via integration by parts a general definition of distributional Laplacian thus giving a meaning to an expression like where is a function and is a measure iii To show that on spaces with Ricci curvature bounded from below and dimension bounded from above the Laplacian of the distance function is always a measure and that this measure has the standard sharp comparison properties This result requires an additional assumption on the space which reduces to strict convexity of the norm in the case of smooth Finsler structures and is always satisfied on spaces with linear Laplacian a situation which is analyzed in detail

Higher-Order Time Asymptotics of Fast Diffusion in Euclidean Space: A Dynamical Systems Approach Jochen Denzler, Herbert Koch, Robert J. McCann, 2015-02-06 This paper quantifies the speed of

convergence and higher order asymptotics of fast diffusion dynamics on  $\mathbb{R}^n$  to the Barenblatt self similar solution Degeneracies in the parabolicity of this equation are cured by re expressing the dynamics on a manifold with a cylindrical end called the cigar The nonlinear evolution becomes differentiable in Hilbert spaces on the cigar The linearization of the dynamics is given by the Laplace Beltrami operator plus a transport term which can be suppressed by introducing appropriate weights into the function space norm plus a finite depth potential well with a universal profile In the limiting case of the linear heat equation the depth diverges the number of eigenstates increases without bound and the continuous spectrum recedes to infinity The authors provide a detailed study of the linear and nonlinear problems in Hilbert spaces on the cigar including a sharp boundedness estimate for the semigroup and use this as a tool to obtain sharp convergence results toward the Barenblatt solution and higher order asymptotics In finer convergence results after modding out symmetries of the problem a subtle interplay between convergence rates and tail behavior is revealed The difficulties involved in choosing the right functional spaces in which to carry out the analysis can be interpreted as genuine features of the equation rather than mere annoying technicalities

**How We Teach Science** John L. Rudolph, 2019-06-01 A former Wisconsin high school science teacher makes the case that how and why we

teach science matters especially now that its legitimacy is under attack Why teach science The answer to that question will determine how it is taught Yet despite the enduring belief in this country that science should be taught there has been no enduring consensus about how or why This is especially true when it comes to teaching scientific process Nearly all of the basic knowledge we have about the world is rock solid The science we teach in high schools in particular laws of motion the structure of the atom cell division DNA replication the universal speed limit of light is accepted as the way nature works Everyone also agrees that students and the public more generally should understand the methods used to gain this knowledge But what exactly is the scientific method Ever since the late 1800s scientists and science educators have grappled with that question Through the years they've advanced an assortment of strategies ranging from the laboratory method to the five step method to science as inquiry to no method at all How We Teach Science reveals that each strategy was influenced by the intellectual cultural and political circumstances of the time In some eras learning about experimentation and scientific inquiry was seen to contribute to an individual's intellectual and moral improvement while in others it was viewed as a way to minimize public interference in institutional science John Rudolph shows that how we think about and teach science will either sustain or thwart future innovation and ultimately determine how science is perceived and received by the public

**The Doctor Who Wasn't There** Jeremy A. Greene, 2022-10-26 This gripping history shows how the electronic devices we use to access care influence the kind of care we receive The Doctor Who Wasn't There traces the long arc of enthusiasm for and skepticism of electronic media in health and medicine Over the past century a series of new technologies promised to democratize access to healthcare From the humble telephone to the connected smartphone from FM radio to wireless wearables from cable television to the electronic brains of networked mainframe computers each new platform has promised a radical reformation of the healthcare landscape With equal attention to the history of technology the history of medicine and the politics and economics of American healthcare physician and historian Jeremy A. Greene explores the role that electronic media play for better and for worse in the past present and future of our health Today's telehealth devices are far more sophisticated than the hook and ringer telephones of the 1920s the radios that broadcasted health data in the 1940s the closed circuit televisions that enabled telemedicine in the 1950s or the online systems that created electronic medical records in the 1960s But the ethical economic and logistical concerns they raise are prefigured in the past as are the gaps between what was promised and what was delivered Each of these platforms also produced subtle transformations in health and healthcare that we have learned to forget displaced by promises of ever newer forms of communication that took their place Illuminating the social and technical contexts in which electronic medicine has been conceived and put into practice Greene's history shows the urgent stakes then and now for those who would seek in new media the means to build a more equitable future for American healthcare *Parliamentary Debates (Hansard)*. Great Britain. Parliament. House of Commons, 2014 *Military Cost-Benefit Analysis* Francois Melese, Anke Richter, Binyam

Solomon,2015-03-27 This is the first comprehensive book on Military Cost Benefit Analysis and provides novel approaches to structuring cost benefit and affordability analysis amidst an uncertain defense environment and cloudy fiscal prospects Lifting the veil on military Cost Benefit Analysis this volume offers several new practical tools designed to guide defense investments and divestments combined with a selection of real world applications The widespread employment of Cost Benefit Analysis offers a unique opportunity to transform legacy defense forces into efficient effective and accountable 21st century organizations A synthesis of economics statistics and decision theory CBA is currently used in a wide range of defense applications in countries around the world i to shape national security strategy ii to set acquisition policy and iii to inform critical investments in people equipment infrastructure services and supplies As sovereign debt challenges squeeze national budgets and emerging threats disrupt traditional notions of security this volume offers valuable tools to navigate the political landscape meet calls for fiscal accountability and boost the effectiveness of defense investments to help guarantee future peace and stability A valuable resource for scholars practitioners novices and experts this book offers a comprehensive overview of Military Cost Benefit Analysis and will appeal to anyone interested or involved in improving national security and will also be of general interest to those responsible for major government programs projects or policies The Education

Invasion Joy Pullmann,2017-03-14 Most Americans had no idea what Common Core was in 2013 according to polls But it had been creeping into schools nationwide over the previous three years and children were feeling its effects They cried over math homework so mystifying their parents could not help them even in elementary school They read motley assortments of informational text instead of classic literature They dreaded the high stakes tests in unfamiliar formats that were increasingly controlling their classrooms How did this latest and most sweeping reform of American education come in mostly under the radar Joy Pullmann started tugging on a thread of reports from worried parents and frustrated teachers and it led to a big tangle of history and politics intrigue and arrogance She unwound it to discover how a cabal of private foundation honchos and unelected public officials cooked up a set of rules for what American children must learn in core K 12 classes and how the Obama administration pressured states to adopt them Thus a federalized education scheme took root despite legal prohibitions against federal involvement in curriculum Common Core and its testing regime were touted as an absolute game changer in public education yet the evidence so far suggests that kids are actually learning less under it Why then was such a costly and disruptive agenda imposed on the nation s schools Who benefits And how can citizens regain local self governance in education so their children s minds will be fed a more nourishing intellectual diet and be protected from the experiments of emboldened bureaucrats The Education Invasion offers answers and remedies **10 Practice Sets Workbook for CDS**

**(Combined Defence Services) Exam** Disha Experts,2018-11-19 10 Practice Sets Workbook for CDS Combined Defence Services Exam is the thoroughly revised and updated 2nd Edition It provides 10 Practice Sets along with detailed solutions Each Set contains 3 tests Mathematics General Knowledge and English Language as per the latest pattern The general

knowledge questions are based on latest current affairs and are based on the latest pattern of CDS exam The solution to each Test is provided at the end of the book This book will really help the students in developing the required Speed and Strike Rate which will increase their final score in the exam
