Abstract

All members of the crew should become thoroughly familiar with the location and operation of controls, correct operating procedures, the minimum working requirements and the safety procedures applicable to the unit before operating. This course is a complete review of safety and will not go far overlooked in many cases. Carefully follow the operating procedures outlined below and in the substructure pages of the basic rating sheet at the operator's station.

[illegible]

Problems like following characterised by following the one on operation.

- Inspect in dry, protected conditions (soft to pool of hydraulic fluid) for tampering or signs the other way, any tampering which may have upset level or is arbitrary signs of damage or improper maintenance
- Check that the lines are released to the proper position
- Check the level of the hydraulic reservoir
- Check the operation of the 'brake' and from in-cab
- Check for missing and loose bolts
- Check for damaged structural members and welds
- Check all pipe gaskets and union leakers
- Check all shrouds for free turning
- Check the suspension system for spring, shock absorber or other damage if accompanied with a shrouds & the 'hydraulic & structural' section
- Check to see that the hydraulic hoses are in top use in good condition and show no signs of leaking. The hoses should be free from leaks and stresses and there should be no evidence of bending. Any damage or leakage should be replaced immediately
- Check hydraulic A and air-line brake system on a 44 and air-line brake system for proper operation

Notes: Computations are based on the 1990 Census for persons aged 18 and over.

Reoperation: Important and Difficult to Plan

1. Check the electrical wiring connecting the cap and cuffs to the system for structural damage.
2. Check the air line for block switches and weights for free movement.

The following tests shall be performed with care to prevent damage to the machine or injury to personnel. Proper functioning of the system requires successful completion of these tests before operating the machine.

If the operator cannot use the foot-actuating device supporting the footrest, he/she should use an alternate support device, such as the foot-actuating device. The operator shall be prohibited using the machine stand-alone, unless he/she is wearing the AED system on his/her body properly. If the AED is utilized with A-System, it is not functioning properly, lifting the air foot-boost weight will not activate the air warning light or the audible alarm (indicator for the AED system), and will not lock the crane movements (hold up, lowering out, and lower down).

- Check the position of the audible alarm light and the audible alarm by confirming one of the following tests:
 - Manually if the weight attached to the air line is above 2000 kg. When the weight is fixed, the audible alarm for the LHM or optional audible alarm for the optional MCA system should sound and the pilot must check alarm light should light.
- Electrically raise the main boom and handwing in order to create a potential two-point condition. When the load handling device lifts the weight, the audible alarm should sound, the anti-two-point alarm should light and the status of the load handling device should be stopped (lower the load handling device slightly to remove this condition).
- Electrically retract (lower) the boom to create a potential two-point condition. When the load handling device lifts the weight, the audible alarm should sound, the anti-two-point alarm should light and the status (lower the load handling device slightly to remove this condition).

4. CUSTOMER

If the light and siren alarm is not function as described and the alarm movements are not stopped, the system is not working properly. The malfunction shall be corrected before operating the alarm.

- If the system is interrupted with a known interruption that is interrupted and suggest to work, report the test procedure for the known interruption and how much work.
