- 1) **Thompson (1984) defines five categories** for the process of spreading diffusion from the origin. **Source** is the starting location; **transmission** is what the person who starts the diffusion is doing; **medium** is the way the diffusion is spread; **channel** is the person or group that is doing the spreading; and **target** is the person or group that is being spread to. **The original source and spreading medium is the only way to spread your culture** (person or thing that spreads is source).
- 2) **Thompson also describes diffusion as** **contagious** (as the flu) or **drop by drop** (the pollution). **It can be passive** (you think or do without knowing) or **active** (you choose to do it).
- 3) **Media** that spread **information** in the context of your needs opens up the **best chance** in the **open marketplace** for the **best group** of **the market**.
- 4) **Active people** usually go to work, and **passive people** go to school, **work**, **concerts** or go to **church**. **Individuals** are **difficult** to reach, and **change** from **passive** to **active** by **seeing** **first-hand** what **others** are **doing** or **thinking** or **believing**.
- 5) **Change** may **occur** **without** **understanding** the **full** **causes** or **consequences** of the **change**. **They** **may** **change** **because** **of** **curiosity**, **habit**, **or** **because** **of** **the** **need** **to** **change**.

This system is designed to capture the essential (200–2000 Hz) lower range of the voice spectrum, to represent the early part of any other speech spectrum. This modification distinguishes the male from the female voice quality. The early speech formants are not captured by the system, but the system is designed to capture the early speech formants by a short burst of speech before the onset of the vowel in the speech.
