**Dependable Systems: Software, Computing, Networks**

Juerg Kohlas, Bertrand Meyer, André Schiper, 2006-11-23 Modern civilization relies on a functioning information infrastructure. As a result, dependability has become a central issue in all disciplines of systems engineering and software architecture. Theories, methods, and tools that help to master the problems encountered in the design process and the management of operations are therefore of utmost importance for the future of information and communication technology. The present volume documents the results of a research program on Dependable Information and Communication Systems (DICS). The members of the project met in two workshops organized by the Hasler Foundation. This state-of-the-art survey contains 3 overview articles identifying major issues of dependability and presenting the latest solutions, as well as 10 carefully selected and revised papers depicting the research results originating from those workshops. The first workshop took place in Munchenwiler, Switzerland, in March 2004, and the second workshop, which marked the conclusion of the projects in Lwenberg, Switzerland, in October 2005. The papers are organized in topical sections on surveys, dependable software, dependable computing, and dependable networks.

*Code Quality* Diomidis Spinellis, 2006-04-03 Page 26 How can I avoid off-by-one errors? Page 143 Are Trojan Horse attacks for real? Page 158 Where should I look when my application can't handle its workload? Page 256 How can I detect memory leaks? Page 309 How do I target my application to international markets? Page 394 How should I name my code's identifiers? Page 441 How can I find and improve the code coverage of my tests?

Diomidis Spinellis' first book, *Code Reading*, showed programmers how to understand and modify key functional properties of software. *Code Quality* focuses on non-functional properties, demonstrating how to meet such critical requirements as reliability, security, portability, and maintainability, as well as efficiency in time and space. Spinellis draws on hundreds of examples from open source projects such as the Apache web and application servers, the BSD Unix systems, and the HSQLDB Java database to illustrate concepts and techniques that every professional software developer will be able to appreciate and apply immediately. Complete files for the open source code illustrated in this book are available online at <http://www.spinellis.gr/codequality>.

*Hagenberg Research* Bruno Buchberger, Michael Affenzeller, Alois Ferscha, Michael Haller, Tudor Jebelean, Erich Peter Klement, Peter Paule, Gustav Pomberger, Wolfgang Schreiner, Robert Stubenrauch, Roland Wagner, Gerhard Weiß, Wolfgang Windsteiger, 2009-05-29 Bruno Buchberger This book is a synopsis of basic and applied research done at the various research institutions of the Softwarepark Hagenberg in Austria. Starting with 15 coworkers in my Research Institute for Symbolic Computation (RISC), I initiated the Softwarepark Hagenberg in 1987 on request of the Upper Austrian Government with the objective of creating a scientific, technological, and economic impulse for the region and the international community. In the meantime, in a joint effort, the Softwarepark Hagenberg has grown to the current 2009 size of over 1000 R&D employees and 1300 students in six research institutions, 40 companies, and 20 academic study programs on the bachelor, master's, and PhD level. The goal of the Softwarepark Hagenberg is innovation of economy in one of the most important current technologies: software. It is the message of this book that this can only be achieved and guaranteed long

term by watering the root namely emphasis on research both basic and applied In this book we summarize what has been achieved in terms of research in the various research institutions in the Softwarepark Hagenberg and what research vision we have for the imminent future When I founded the Softwarepark Hagenberg in addition to the watering the root principle I had the vision that such a technology park can only prosper if we realize the magic triangle i e the close interaction of research academic education and business applications at one site see Figure 1
