- Place the heel of one hand over the person's breastbone. Place the other hand on top of the first hand. Keep your elbows straight.
- Using your upper body push straight down compressing the chest to about 2 inches. Push hard at a rate of 100 compressions per minute.

Airway - Clear the airway

- If trained for CPR, after 30 compressions, open the person's airway by placing your palm on the person's forehead and gently tilt the head back. With the other hand gently lift the chin forward to open the airway.
- Check for normal breathing, chest motion, and listen for normal breathing sounds.

Breathing - Breathe for the person

- Pinch the nostrils and cover the person's mouth with yours.
- Give the first rescue breath and watch to see if the chest rises. If it does rise give the second breath. If the chest doesn't rise, repeat the head tilt, chin lift, and give the second breath.
