

Building reinforced, diaphragm and wide plan freestanding walls

This Guide, for builders, designers and planners, presents rule of thumb guidance for stable construction of a range of common brick or blockwork wall types. Separate values for wall height and foundation width are given for increasing levels of exposure across the UK and solutions can be compared with complementary advice published for simple plan unreinforced walls (Good Building Guide 14).

The Guide includes notes on materials selection and good construction practice. The need for good supervision is stressed, particularly with reinforced walls, where a number of quite different building operations are involved which require careful coordination and execution.

The advice in this guide allows walls to be built up to a height of 2.5 m. Before starting you should check local planning restrictions, which may limit walls to a maximum height of 2 m or less.
