Greening Existing Buildings Book:

Sustainable Preservation Jean Carroon, 2010-11-16 Sustainable Preservation takes a nuanced look at the hundreds of choices that adaptive reuse requires architects to make from ingenious ways to redeploy existing structural elements to time honored techniques for natural ventilation to creation of wetlands that restore a site's natural biological functions. In addition Sustainable Preservation presents 50 case studies of projects schools houses offices stores museums and government buildings that set new standards for holistic approaches to adaptive reuse and sustainability. The author covers design issues from building location to lighting systems renewable power options stormwater handling and building envelope protection and integrity. The book also reviews operational issues including materials choices for low lifetime maintenance green housekeeping and indoor air quality. Greening Existing Buildings Jerry Yudelson, Greening Existing Buildings with Leadership in Energy and Environmental Design-Existing Buildings! Tyson H. Dirksen, Mark D. McGowan, Massachusetts Institute of Technology. Department of Urban Studies and Planning, Massachusetts Institute of Technology. Center for Real Estate, 2008 The market of existing office buildings is going green. While early adopters of green buildings were owner occupiers there is a current wave of nonowner occupied office buildings seeking Leadership in Energy and Environmental Design LEED for Existing Buildings certification. This thesis examines the current context in which this dramatic change is transpiring as well as answers the following questions as they relate to this green transformation of existing multitenanted office buildings: Who is participating? Why are they participating? What is the process? What are the costs? How is it being financed? Research conducted included literature review and interviews with building owners property managers building engineers and brokers in several major metropolitan office markets in the United States. This thesis examines green building rating systems from around the world. We focus on the LEED rating system the most widely used in the United States as it provides a good framework for owners and managers to evaluate and benchmark the environmental performance of their building. Our research indicates that a much higher percentage of Class A office building owners and managers are pursuing LEED for Existing Building LEED EB certification while Class B owners and managers are not. Class B owners face less incentives and greater obstacles when pursuing LEED EB certification. In chapter four of this thesis we explore two creative ways that Class B owners and managers may be able to overcome some of these hurdles: Energy Savings Performance Contracts (ESPCs) and Power Purchase Agreements (PPA). **The Paid-From-Savings Guide to Green Existing Buildings** Robert Neal Van Der Like, Peggy Meehan, 2009-01-01 **The Green Building Revolution** Jerry Yudelson, 2008 The Green Building Revolution introduces reader to the basics of green building and to the projects and people that are advancing this movement. It shows readers why and how to start thinking about designing building and operating high performance environmentally aware primarily LEED certified buildings on conventional budgets. *Greening Existing Buildings* Jerry Yudelson, 2010 A practical reference for building owners developers and facility managers on how to green existing buildings.

on conventional budgets taking them step by step through each phase of project design construction and operations

The Green Building Bottom Line (GreenSource Books; Green Source) : The Real Cost of Sustainable Building Martin Melaver, Phyllis Mueller, 2008-10-31 What are the real costs and real benefits of building green As any builder knows cost estimation and reality are often two very different things The Green Building Bottom Line makes the case for green building by providing the insights and data that demonstrate the true costs and benefits of building green It's a why to and a how to that explores everything from the ground up The Green Building Bottom Line puts an entire development team at the table to better understand both the issues encountered and what's behind the perceived price premium for building green This candid and transparent account explores every aspect of green development on groundbreaking projects from the nation's first all retail LEED core and shell project to an innovative multitenanted LEED Existing Buildings office project to a mixed use hotel retail condo project in a transitional urban market The authors focus on such issues as values culture life cycle costs insurance financing coordinating a team marketing and negotiating leases Includes Detailed case studies of green building projects start to finish Information on financial legal and operational aspects of the job The real world costs of green building not unrealistic estimates A behind the scenes look at the LEED building process Unique insight from those who have actually done the work The Green Building Bottom Line covers Economical and ecological benefits Auditing sustainability in existing buildings Financial benefits of green tenancy Loan analysis Insurance underwriting Expense reduction Writing a green lease Converting an existing building Green retail Brokering sustainability Marketing HR practices and processes
