Professional Uncertainty, Knowledge and Relationship in the Classroom Joseph Mintz,2014-06-27 The extent to which

teachers should make use of theoretical and expert knowledge as opposed to tacit experiential knowledge and how these might be combined is a perennial issue in discussions on pedagogy This book addresses these debates through a creative development of the concept of productive uncertainty Using case studies focusing on teachers working with children with autism a particularly fertile crucible for considering uncertainty the book explores how the radical 20th century psychoanalyst Wilfred Bion's epistemological approach to uncertainty can be used to re frame Donald Schön's concept of reflection in action offering a new perspective on the practice of teachers and other caring professionals Several areas of potential uncertainty are identified including uncertainty relating to areas of practice including diagnosis the relationship between expert knowledge and practice the implications of autism for autonomy and agency and uncertainties in relation to the understanding of and use of new technologies A strong argument is made based on both theoretical and empirical grounds that in juggling between theoretical and tacit knowledge in the classroom there is more to be gained by staying with the struggle with uncertainty than by fleeing from it too early into the promise of expert solutions Consideration is also given to the relative importance of specific theoretical training for teachers both in general and in relation to working with children with special educational needs in the context of international and UK policy developments in this area This book will be of key value to researchers and postgraduates in the fields of education studies teacher thinking and research

psychoanalytically informed psychosocial studies as well as to practitioners working in special educational needs autism education

The Climate Demon R. Saravanan, 2021-10-21 Climate predictions and the computer models behind them play a key role in shaping public opinion and our response to the climate crisis Some people interpret these predictions as prophecies of doom and some others dismiss them as mere speculation but the vast majority are only vaguely aware of the science behind them This book gives a balanced view of the strengths and limitations of climate modeling It covers historical developments current challenges and future trends in the field The accessible discussion of climate modeling only requires a basic knowledge of science Uncertainties in climate predictions and their implications for

assessing climate risk are analyzed as are the computational challenges faced by future models The book concludes by highlighting the dangers of climate doomism while also making clear the value of predictive models and the severe and very real risks posed by anthropogenic climate change **Cuba Under Siege** K. life of all who work in government. They tell each other stories about the origins, aims and effects of policies to make sense of their world. These stories form the collective memory of a government department, a retelling of yesterday to make sense of today. This book examines policies through the eyes of the practitioners, both top down and bottom up. It decentres policies and policymaking. To decentre is to unpack practices as the contingent beliefs and actions of individuals. Decentred analysis produces detailed studies of people's beliefs and practices. It challenges the idea that inexorable or impersonal forces drive politics, focusing instead on the relevant meanings, the beliefs and preferences of the people involved. This book presents ten case studies covering penal policy, zero carbon homes, parliamentary scrutiny, children's rights, obesity, pension reform, public service reform, evidence based policing and local economic knowledge. It introduces a different angle of vision on the policy process; it looks at it through the eyes of individual actors, not institutions. In other words, it looks at policies from the other end of the telescope. It concludes there is much to learn from a decentred approach. It delivers edification because it offers a novel alliance of interpretive theory with an ethnographic toolkit to explore policy and policymaking from the bottom up. Written by members of the Department of Politics and International Relations of the University of Southampton, with their collaborators at other universities, the book's decentred approach provides an alternative to the dominant evidence based policy nostrums of the day.
