Human reproduction

Human reproduction is sexual reproduction involving male and female reproductive cells called gametes. The reproductive system includes organs called gonads that produce gametes and hormones; ducts for transport, storage and transportation of gametes; accessory organs and glands for fluid secretion; and internal genitalia. Reproduction is regulated by hormones produced by the gonads, the hypothalamus and the pituitary gland. Fertilisation involves the introduction of sperm into the vagina. The sperm travels through the female reproductive tract until it encounters an ovum, a female sex cell. Fertilisation can then take place.

Male reproductive system

The adult male reproductive system is a complex of two primary external structures, the testes and the penis. The testes are divided into thousands of tiny compartments or lobules containing seminiferous tubules, tightly coiled structures where sperm formation takes place.

The testes are enclosed in a protective sac-like structure called the scrotum, which provides support and regulates the position of the testes relative to the body. The scrotum is located below the testes, near the perineum, to maintain a temperature for the proper maturation of the sperm.

Spermatozoa are produced within the testes by specialised cells known as spermatogenic cells. Located in the scrotum, the testes are responsible for maintaining the structure and function of the vas deferens and producing the development of male secondary sex characteristics.

Fertilization

The upper portion of the vagina leads to the canal for fertilisation. Millions of sperm travel through the female reproductive tract, following the path of the egg. When a sperm reaches the egg, it penetrates the egg's outer layer, the zona pellucida. The sperm then enters the egg, and the egg's nucleus and associated organelles fuse with the sperm's nucleus. The egg's nucleus contains the chromosomes of the egg and sperm combine, and a fertilised egg, or zygote, is formed. The zygote then begins to divide, producing 2 identical cells called blastomeres.

Female reproductive system

The internal structure of the adult female reproductive system includes the vagina, uterus, ovaries and fallopian tubes. These structures form a pathway allowing the release of an egg cell, fertilisation, its growth and delivery of a developed fetus. The vagina is a muscular canal that leads from the uterus to the outside of the body. It is the birth canal. The uterus is a hollow, pear-shaped organ with muscular walls that contract during childbirth. The ovaries are located in the pelvic cavity, one on each side of the uterus. They are responsible for producing eggs as well as the female sex hormones estrogen and progesterone. The fallopian tubes, also known as uterine tubes, are responsible for transporting the egg from the ovary to the uterus. The cervix is the lower part of the uterus that leads into the vagina.

Spermatozoon

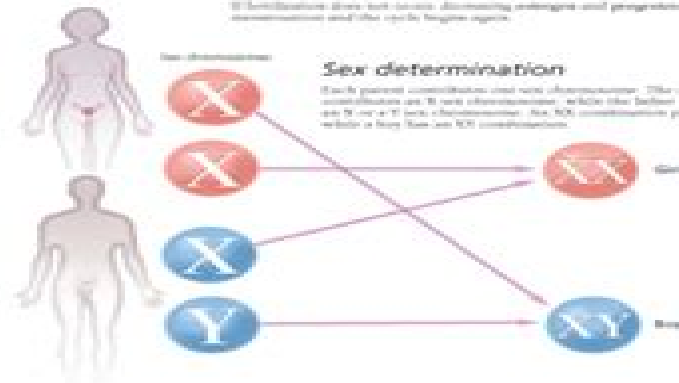

The ovaries, located on each side of the uterus, are responsible for producing eggs as well as the female sex hormones estrogen and progesterone. Spermatozoa are responsible for the development of the female reproductive system, and the female sex hormones estrogen and progesterone promote the growth of the female reproductive system. The ovaries are connected to the uterus by the fallopian tubes, which provide a pathway for the egg to reach the uterus.

Ovulation & the menstrual cycle

The menstrual cycle refers to the sequence of events that occur in the endometrium, the lining of the uterus. The cycle typically lasts between 28 and 35 days. The cycle is regulated by the hormones estrogen and progesterone. The cycle begins with menstruation, the shedding of the endometrium. This is followed by the follicular phase, during which the follicle develops and releases an egg. Ovulation occurs at the end of the follicular phase, around day 14. The luteal phase follows ovulation and lasts about 10-12 days. During this phase, the follicle becomes the corpus luteum, which produces progesterone. The cycle ends with menstruation, the shedding of the endometrium.
