Atlas of Coastal Ecosystems in the Western Gulf of California Mark E. Johnson, Jorge Ledesma-Vázquez, 2009 The Gulf of California is one of the most beautiful places in the world but it is also important to earth and marine scientists who work far beyond the area In text and an accompanying CD ROM with stunning satellite images this atlas captures the dynamics of natural cycles in the fertility of the Gulf of California that have been in near continuous operation for more than five million years The book is designed to answer key questions that link the health of coastal ecosystems with the region's evolutionary history What was the richness of fossil ecosystems in the Gulf of California How has it changed over time Which ecosystems are most amenable to conservation With an emphasis on the intricate workings of the Gulf a team of scientists led by Mark E Johnson and Jorge Ledesma Vázquez explores how marine invertebrates such as corals and bivalves as well as certain algae contribute to the operation of a vast organic engine that acts as a significant carbon trap The Atlas reveals that the role of these organisms in the ecology of the Gulf was greatly underestimated in the past The organisms that live in these environments or provide the sediments for beaches and dunes are mass producers of calcium carbonate Until now no book has considered the centrality of calcium carbonate production as it functions today across multiple ecosystems and how it has evolved over time An important work of scholarship that also evokes the region's natural splendor the Atlas will be of interest to a wide range of scientists including geologists paleontologists marine biologists ecologists and conservation biologists
