Soil-Structure Interaction, Underground Structures and Retaining Walls V.M. Ulitsky, Alexey G. Shashkin, 2015-02-15 With construction techniques becoming ever more complex and population pressure leading to the development of increasingly problematic sites expertise in the area of soil structure interaction is crucial to architectural and construction industries worldwide This book contains the proceedings of the ISSMGE Technical Committee 207 International Conference on Geotechnical Engineering Soil Structure Interaction and Retaining Walls held in St Petersburg Russia in June 2014 The conference was dedicated to the memory of the outstanding geotechnical expert Gregory Porphyryevich Tschebotarioff Topics covered at the conference included soil structure interaction underground structures and retaining walls site investigation as a source of input parameters for soil structure interaction and interaction between structures and frozen soils The papers included here are the English language papers Papers presented by the authors in Russian are published by the Georeconstruction Institute of St Petersburg

Rock Dynamics and Applications - State of the Art Jian Zhao, Jianchun Li, 2013-05-13 Rock dynamics studies the response of rock materials and rock masses under dynamic loading conditions In the last a couple of decades the development of experimental and computational techniques has been able to capture the progress of fracturing in microsecond steps allowing the exploration on how the fracture is initiated propagated and branched

Optimization of Multistage Hydraulic Fracturing Treatment for Maximization of the Tight Gas Productivity Mengting Li, 2018-12-17 Hydraulic fracturing is essential technology for the development of unconventional resources such as tight gas So far there

are no numerical tools which can optimize the whole process from geological modeling hydraulic fracturing until production simulation with the same 3D model with consideration of the thermo hydro mechanical coupling In this dissertation a workflow and a numerical tool chain were developed for design and optimization of multistage hydraulic fracturing in horizontal well regarding a maximum productivity of the tight gas wellbore After the verification a full 3D reservoir model is generated based on a real tight gas field in the North German Basin Through analysis of simulation results a new calculation formula of FCD was proposed which takes the proppant position and concentration into account and can predict the gas production rate more accurately However not only FCD but also proppant distribution and hydraulic connection of stimulated fractures to the well geological structure and the interaction between fractures are determinant for the gas production volume Through analysis the numerical results of sensitivity analysis and optimization variations there is no unique criterion to determine the optimal number and spacing of the fractures it should be analyzed firstly in detail to the actual situation and decided then from case to case

Handbook on Tunnels and Underground Works Emilio Bilotta, Renato Casale, Claudio Giulio di Prisco, Salvatore Miliziano, Daniele Peila, Andrea Pigorini, Enrico Maria Pizzarotti, 2024-10-31 This book set provides a new global updated thorough clear and practical risk based approach to tunnelling design and construction methods and discusses detailed examples of solutions applied to relevant case histories It is organized in three sequential and integrated volumes Volume 1 Concept Basic Principles of Design Volume 2 Construction Methods Equipment Tools and Materials Volume 3 Case Histories and Best Practices This book covers all aspects of tunnelling giving useful and practical information about design Vol 1 construction Vol 2 and best practices Vol 3 It provides the following features and benefits updated vision on tunnelling design tools materials and construction balanced mix of theory technology and applied experience different and harmonized points of view from academics professionals and contractors easy consultation in the form of a handbook risk oriented approach to tunnelling problems The tunnelling industry is amazingly widespread and increasingly important all over the world particularly in developing countries The possible audience of this book are engineers geologists designers constructors providers contractors public and private customers and in general technicians involved in the tunnelling and underground works industry It is also a suitable source of information for industry professionals senior undergraduate and graduate students researchers and academics

New numerical approaches to model hydraulic fracturing in tight reservoirs with consideration of hydro-mechanical coupling effects Lei Zhou, 2014-03-20 In this dissertation two new numerical approaches for hydraulic fracturing in tight reservoir were developed A more physical based numerical 3D model was developed for simulating the whole hydraulic fracturing process including fracture propagation closure and contact as well as proppant transport and settling In this approach rock formation pore and fracture systems were assembled together in which hydro mechanical coupling effect proppant transport and settling as well as their influences on fracture closure and contact were fully considered A combined FDM and FVM schema was used to solve the problem Three applications by using

the new approach were presented. The results illustrated the whole hydraulic fracturing process well and seemed to be logical which confirmed the ability of the developed approach to model the in situ hydraulic fracturing operation from injection start till fully closure. In order to investigate the orientation problem of hydraulic fracturing in tight reservoir a new approach for simulating arbitrary fracture propagation and orientation in 2D was developed. It was solved by a hybrid schema of XFEM and FVM. Three numerical studies were illustrated which proved the ability of the developed approach to solve the orientation problem in field cases.
