Applications

The FX-BTCVT Bluetooth® Commissioning Converter is a communications converter that provides a temporary connection between the laptop running the Facility Explorer Programmable Controller Programming and Commissioning Tool (FX-PCT) software and an FX-PC Controller.

The Bluetooth Commissioning Converter provides communication from the FX-PCs Field Controller Bus (FC Bus) or the Sensor Actuator Bus (SA Bus) to a Bluetooth enabled laptop computer. The Bluetooth Commissioning Converter converts BACnet® Master-Slave/Token-Passing (MS/TP) protocol communication to 2.4 GHz Bluetooth wireless communication and from Bluetooth wireless communication back to MS/TP communication.

A strap, provided with the Bluetooth Commissioning Converter, allows you to hang the Bluetooth Commissioning Converter from the NS Series Network Sensor or next to the FX-PC controller. The wireless connection allows you to be up to 10 m (33 ft) away while you commission the controller with a laptop computer and the FX-PCT software. The Bluetooth Commissioning Converter is compatible with the following Facility Explorer Programmable Controllers (FX-PCs):

- General Purpose Programmable Controllers (FX-PCGs)
- Programmable Variable Air Volume (VAV) Box Controllers (FX-PCVs)
- Expansion Input/Output Modules (FX-PCXs)
- NS Series Network Sensors

The Bluetooth Commissioning Converter uses Bluetooth wireless technology but has not been licensed by the Bluetooth Special Interest Group (SIG); therefore, only use the Bluetooth Commissioning Converter with the recommended wireless devices as indicated in the [Installing and Setting up Bluetooth Wireless Technology on Your Laptop Computer](#) section of this document.

The Bluetooth Commissioning Converter can be used in conjunction with the FX-ZFR Series Wireless Field Bus System; however, the wireless technologies of the Bluetooth Commissioning Converter and the FX-ZFR Series System do not directly interact.

When the Bluetooth Commissioning Converter is connected on the hard-wired portion of an FC Bus, it can be used to commission and communicate with any FX-PC controller, whether it is hard-wired to the FC Bus or wirelessly enabled through the FX-ZFR Series Wireless Field Bus System.

When the Bluetooth Commissioning Converter is connected directly to a wirelessly enabled FX-PC, it commissions and communicates with only that controller.

Evaluating Women's

Health Messages Roxanne Louiselle Parrott, Celeste Michelle Condit, 1996-02-01 The increasing attention placed on women's reproductive health issues in recent years has produced a corresponding interest in the role that communication plays from promoting better health care to fostering greater well being. *Evaluating Women's Health Messages* is the first systematic examination of women's health communication. Compiling the works of over 30 contributors, editors Roxanne Louiselle Parrott and Celeste Condit explore the various forms health messages take: medical, social, scientific, and public, and the ways in which they compare with and contradict each other. The book is at once groundbreaking and comprehensive, examining the range of health issues from political, historical, technological, social support, and feminist perspectives, all within the broad framework of communication. With two chapters on each topic, the book provides a variety of perspectives on such issues as abortion, infertility, drug and alcohol use in pregnancy, childbirth, prenatal care, AIDS, breast cancer, reproductive technologies, menstruation, menopause, and hysterectomy. *Evaluating Women's Health Messages* is a vital tool for every professional interested in women's health concerns, as well as students taking courses in health communication, women's health, public health, sociology of health, health education, and gender studies.

Airport Baggage Handling Systems Brahim Rekiek, 2023-10-19 The competition between airports demands higher quality services to satisfy passengers. A Baggage Handling System (BHS) serves functions such as baggage sorting, screening, and storage. A successful BHS means bags move between areas as travellers do. Handlers load, unload, bags, and transfer them between the airport's areas. Automation can save money and bring safety and operational benefits. Warehouses, as well as the automotive industry, are more advanced technologically in comparison to the airport, and especially the baggage handling business. The concept of the Baggage Factory (BF) is an approach based on Industry 4.0 that simplifies the processes from the moment passengers drop off their bags at check-in till the destination chutes, carousels, and so forth. *Airport Baggage Handling Systems: Using the Baggage Factory Approach to Support AI Optimisation Decisions and Design Processes* introduces the features of the BF concept and presents how BHS designers can use AI technology to tackle many BHS problems and concerns. The book bridges the gap between airport BHS designers and experts in AI and optimisation. It describes in detail the field of baggage handling, using algorithms for sorting bags or optimising the flow. The way the systems are designed is discussed, and a behind-the-scenes look at the BHS industry and how it affects the daily lives of travellers is presented. International and multidisciplinary in approach, this book is an ideal resource for practitioners, students, and researchers involved in the air transportation industry.
