- a. Study the theory box. Then fill in the gaps with an appropriate adverb from the theory box.

Most adjectives can be made more emphatic by using adverbs with them, e.g. **really/very good**, **absolutely/totally amazing**. Some adverbs collocate with both gradable and non-gradable adjectives, e.g. **really good/amazing**. However, not all adverbs and adjectives collocate, e.g. **very/really interesting**. Not **totally interesting**.

- |                      |                        |

Three Practice Papers with Answers as per the guidelines issued by NTA **Defining access to countermeasures** World Health Organization, 2025-06-15 This landscape report on the current status of activities related to medical countermeasures (MCMs) for pandemic response underscores the urgent need for action in this critical area From bolstering research and development to diversifying manufacturing capacities coordinating global procurement efforts ensuring equitable allocation approaches for these lifesaving interventions and making sure arrangements are in place so that they reach the very last mile and enable appropriate use by those in need the journey toward pandemic preparedness traverses a multifaceted landscape Yet despite the progress made critical gaps in MCM related aspects remain and vulnerabilities urgently need to be addressed

This report explores scientific advancements and ongoing or planned activities in the field of MCMs. While there is much progress to note and acknowledge, it is evident that significant work remains to strengthen our abilities to prepare for and respond to pandemics. Moreover, no single entity can tackle this monumental task alone. A network of networks is needed wherein collaboration and coordination among regional and global health actors are strengthened, ensuring a coherent, streamlined, and accountable approach to pandemic preparedness. This report emphasizes the importance of collective effort in navigating the complex landscape of medical countermeasures and enhancing global health security.

*Comprehensive Nuclear Materials*, 2020-07-22. Materials in a nuclear environment are exposed to extreme conditions of radiation, temperature, and/or corrosion, and in many cases, the combination of these makes the material behavior very different from conventional materials. This is evident for the four major technological challenges the nuclear technology domain is facing currently: i) long-term operation of existing Generation II nuclear power plants; ii) the design of the next generation reactors; Generation IV; iii) the construction of the ITER fusion reactor in Cadarache, France; iv) and the intermediate and final disposal of nuclear waste. In order to address these challenges, engineers and designers need to know the properties of a wide variety of materials under these conditions and to understand the underlying processes affecting changes in their behavior in order to assess their performance and to determine the limits of operation. *Comprehensive Nuclear Materials*, Second Edition, Seven Volume Set provides broad-ranging, validated summaries of all the major topics in the field of nuclear material research for fission as well as fusion reactor systems. Attention is given to the fundamental scientific aspects of nuclear materials: fuel and structural materials for fission reactors; waste materials; and materials for fusion reactors. The articles are written at a level that allows undergraduate students to understand the material while providing active researchers with a ready reference resource of information. Most of the chapters from the first Edition have been revised and updated, and a significant number of new topics are covered in completely new material. During the ten years between the two editions, the challenge for applications of nuclear materials has been significantly impacted by world events, public awareness, and technological innovation. Materials play a key role as enablers of new technologies, and we trust that this new edition of *Comprehensive Nuclear Materials* has captured the key recent developments. Critically reviews the major classes and functions of materials supporting the selection, assessment, validation, and engineering of materials in extreme nuclear environments. Comprehensive resource for up-to-date and authoritative information which is not always available elsewhere, even in journals. Provides an in-depth treatment of materials modeling and simulation with a specific focus on nuclear issues. Serves as an excellent entry point for students and researchers new to the field.

**Nature-Based Solutions for agricultural water management and food security**. Food and Agriculture Organization of the United Nations, 2019-03-14. Accessibility to clean and sufficient water resources for agriculture is key in feeding the steadily increasing world population in a sustainable manner. Nature-Based Solutions (NBS) offer a promising contribution to enhance availability and quality of water.

for productive purposes and human consumption while simultaneously striving to preserve the integrity and intrinsic value of the ecosystems Implementing successful NBS for water management however is not an easy task since many ecosystems are already severely degraded and exploited beyond their regenerative capacity Furthermore ecosystems are large and complex and the many stakeholders involved may have conflicting interests Hence implementation of NBS requires a structured and comprehensive approach that starts with the valuation of the services provided by the ecosystem The whole set of use and non use values in monetary terms provides a factual basis to guide the implementation of NBS which is ideally based on transdisciplinary principles i e complemented with scientific and case specific knowledge of the ecosystem in an adaptive decision making process that involves the relevant stakeholders This discussion paper evaluated twenty one NBS case studies using a non representative sample to learn from successful and failed experiences and to identify possible causalities among factors that characterize the implementation of NBS The case studies give a minor role to valuation of ecosystem services an area for which the literature is still developing guidance Less successful water management projects tend to suffer from inadequate factual and scientific basis and uncoordinated or insufficient stakeholder involvement and lack of long term planning Successful case studies point to satisfactory understanding of the functioning of ecosystems and importance of multi stakeholder platforms well identified funding schemes realistic monitoring and evaluation systems and endurance of its promoters
