

# OPERATING INSTRUCTIONS

## OPERATING SAFETY INSTRUCTIONS

Before getting off tractor, or permitting anyone to work on machine or implement, perform the following:

1. Put shift lever in neutral.
2. Declutch attachment.
3. Set parking brake.
4. Shut off engine.
5. Allow adequate time for all moving parts to stop.

## PREPARING TRACTOR FOR OPERATION

The operating speed and throttle setting will be determined by the implement being used as well as individual conditions encountered in the work being performed. The Operator's Manual supplied with each implement should be consulted for detailed operating instructions.

It is important to become thoroughly familiar with the handling characteristics of your tractor and with the instructions contained in this manual BEFORE attempting to use your tractor for the various operations which it can perform. Drive the tractor without operating an implement until you become familiar with its controls.

1. Check the engine crankcase oil level by removing the filler plug (See Figure 10). If oil is below top of slot in filler neck, add oil of proper grade as outlined on Page 10.

Figure 10

2. Check the fuel supply and fill tank if necessary. Open the fuel shutoff valve. (See Figure 11).
3. Check tires for proper inflation pressure, see page 12.

Figure 11

4. If an implement is to be used, check it for proper installation, securely tightened fasteners and good operating condition. Refer to the Implement Manual for operating and maintenance instructions.

## WEIGHT FOR ADDED TRACTION

Liquid fill can be used in the rear tires to add weight to the tractor. The tires are equipped with a special inflation valve so they can be filled two-thirds full of liquid to provide additional weight. If the anticipated temperatures are above freezing, clean water can be used. For temperatures below freezing, a calcium chloride solution should be used. After the tires have been two-thirds filled with liquid, compressed air is used to inflate them to the pressure recommended on page 12. Weight added when tires are properly filled will approximately be 35 to 40 lbs. per wheel.

When checking inflation pressure of liquid-filled tires, turn the wheel so the valve stem is at the top to avoid getting fluid into the tire gauge.

## IMPORTANT

If calcium chloride solution is used in the wide base (tubeless) rear tires, over an extended period of time, it is recommended that inner tubes be used. Such tubes can be obtained from most well-stocked tire stores.
