A

The newspaper production process has come a long way from the old days when the paper was written, edited, typeset and ultimately printed in one building with the journalists working on the upper floors and the printing process going on the ground floor. These days the editors, subeditors and journalists who put the paper together are likely to find themselves in a totally different building or maybe even in a different city. This is the situation which now prevails in Sydney. The daily paper is composed at the editorial headquarters, known as the progress centre, in the heart of the city, but printed for every inch of the suburbs at the printing centre. Here human beings are in the minority as much of the work is done by automated machines controlled by computers.

B

Once the finished newspaper has been created for the next morning's edition, all the pages are transmitted electronically from the progress centre to the printing centre. The system of transmission is as simple as the sophisticated page formats system already in use on many other newspapers. An imagecaster at the printing centre delivers the pages as files. Each page takes less than a minute to produce, although for colour pages four versions, one each for black, cyan, magenta and yellow, are sent. The pages are then processed via photographic negatives and the film is used to produce aluminium printing plates ready for the press.

C

A procession of automated vehicles is busy at the new printing centre where the Sydney Morning Herald is printed each day. With light flashing and warning beeps sounding, the robots (to give them their correct name, the LGVs or laser guided vehicles) look for all the world like autonomous machines from a science fiction movie, as they follow their own random paths around the plant busily getting on with their jobs. Automation of this kind is now standard in all modern newspaper plants. The robots can detect unauthorised personnel and shut security staff immediately if they find an "intruder". Not surprisingly, tall tales are already being told about the machines starting to take on personalities of their own.

D

The robots' principal job, however, is to shift the unprinted (the printing paper) that arrives at the plant in huge rolls and unrolls at the other end where two later on newspapers. Once the size of the

day's paper and the publishing order are determined at head office, the information is punched into the computer and the LGVs are programmed to go about their work. The LGVs collect the appropriate size paper rolls and take them where they have to go. When the press needs another roll its computer starts the LGV system. The Sydney LGVs move freely around the press room fulfilling their tertiary functions to collect rolls of newspaper rather than the roll stripping stations, or from the rolled supplies in the newspaper storage area. At the stripping station the rough wrapping that helps to protect a roll of paper from rough handling is removed. Any damaged paper is peeled off and the roll is then wrapped.

E

Then one of the four paper robots arrives in, specifically designed for the job, it tears the paper neatly and prepares the roll for the press. If required the roll can be loaded directly onto the press, if not needed immediately, an LGV takes it to the storage area. When the press computer calls for a roll, an LGV takes it to the roll loading area of the press. It lifts the roll into the loading position and places it in the correct spot with complete accuracy. As each roll is used up, the press drops the heavy cardboard core into a waste bin. When the bin is full, another LGV collects it and deposits the core into a dumpster for recycling.

F

The LGVs move at walking speed. Should anyone stop in front of one or get too close, sensors stop the vehicle until the path is clear. The company has chosen a computerised function system for the vehicles because, as the project development manager says "The beauty of it is that if you want to change the routes, you can walk out a new route on your computer and lay it down for them to follow". When an LGV's batteries run low, it will take itself off line and go to the nearest battery maintenance point for replacement batteries. And all this is achieved with absolute minimum human input and a much reduced risk of injury to people working in the printing centre.

G

The question newspaper workers must now ask, however is, "How long will it be before the robots are writing the newspapers as well as running the printing centre, changing over the latest edition every morning?"
