competencies has received global recognition but instructional methods have not been reformed to include the teaching of these skills. Multiple frameworks include creativity, critical thinking, communication, and collaboration as the foundational competencies. Complexities of planning curriculum and delivering instruction to develop the foundational competencies requires professional training. However, despite training, instructional practice can be impacted by barriers caused by personal views of teachers, economic constraints, access to resources, social challenges, pandemic, overwhelming pace of global shifts, and other influences. With digitalization entering the field of education, it is unclear if technology has helped in removing or eliminating the barriers or has itself become another obstruction in integrating the competencies. Gaining an educator's perspective is essential to understanding the barriers as well as solutions to mitigate the impediments through innovative instructional methods being practiced across the globe via digital or non-digital platforms. The need for original contributions from educators exists in this area of barriers to 21st-century education and the role of digitalization. The *Handbook of Research on Barriers for Teaching 21st Century Competencies and the Impact of Digitalization* discusses teaching the 21st-century competencies, namely critical thinking, creativity, collaboration, and communication. This book presents both the problems or gaps causing barriers and brings forth practical solutions, digital and non-digital, to meet the educational shifts. The chapters will determine the specific barriers that exist, whether political, social, economic, or technological, to integrating competencies and the methods or strategies that can eliminate these barriers through compatible instructional approaches. Additionally, the chapters provide knowledge on the impacts of digitalization in general on teaching and learning and how digital innovations are either beneficial to removing impediments for students or rather causing obstructions in integrating the four competencies. This book is ideally intended for educators and administrators working directly with students, educational researchers, educational software developers, policymakers, teachers, practitioners, and students interested in how 21st-century competencies can be taught while facing the impacts of digitalization on education.

Critical Thinking in the 21st Century Dallas Ann Dallman, 2015. Critical thinking can be

described as the process by which an individual or group of individuals collects organizes and evaluates information with the purpose of making judgments that guide beliefs and actions While the development of critical thinking skills has long been a goal of education and is thought to be even more critical in the world of the 21st century there is evidence to suggest it is not an easy outcome to realize It is unknown whether today's pre service teachers are prepared to encourage and support the development of critical thinking skills in the k 8 classroom This mixed methods study explores the perceptions of elementary pre service teachers with regard to their personal application of critical thinking skills and their ability to promote the development and application of critical thinking skills in a k 8 classroom Both quantitative and qualitative data were collected from participants who were enrolled in an elementary social studies methods course Data collection included a self reporting survey of everyday critical thinking a document analysis of civics and government lesson plans and face to face interviews These three different data points help build a complete picture of the ways in which critical thinking is or is not promoted in elementary classrooms The results demonstrated that pre service elementary teachers believe themselves to be critical thinkers at least some of the time however few critical thinking skills were required in the lesson plans designed by participants While the interviews help to shed some light on the reasons the study is not conclusive in this area The study certainly reinforces the idea that critical thinking is a complex and abstract idea difficult to define measure or teach at any age level
