

## **Four Factors of Production in the Ecosystem - Paper Example Essay**

### **Introduction**

Factors of production are the inputs needed for supply and are used in combinations to produce goods and services that lead to the generation of economic profit. Since the factors of production are limited by nature, while the human wants to tend to be unlimited a country is faced by the issue of decision-making on the efficient sharing of these factors of production (Kimberly, 2018). The four factors of production include labor, and land entrepreneurship and capital.

### **Land**

Land tends to be short of the natural resources that are needed to generate supply. These natural resources include the raw properties and anything else that originates from the ground. This can be either the non-renewable resources for example gold and oil or the renewable resources for example timbers. Once human beings have changed these resources from their natural form, the resources are converted to the capital good. For example, oil tends to occur as a natural resource but when changed to gasoline it occurs as a capital good (Kimberly 2018). The income gained by landowners is called rent. The United States has many accessible natural resources such as water and the fertile land. The country also tends to be surrounded by a large coastline, high amount of oil and moderate climatic conditions.

### **Labour**

Labour is considered as the amount of work done by a human being, the value of labor is highly dependent on the worker's skills, education, and motivation levels. Labour is also dependant on productivity whereby it measures the amount every hour of the laborers time produces in output. The income or reward for labor is considered wages. In America, there is a huge mobile and skilled labor force that tends to respond efficiently to the developing business needs. However, the United States workforce is met with increased competition from neighbouring countries thus leading to the outsourcing of the workforce. The United States Bureau of labor statistics is in charge of measuring the American labor force report that includes the unemployed and the employed.

### **Capital**

Capital tends to be the short form of capital goods, which involve the human-made objects. For example, the equipment's, machinery, and the chemicals used in the process of production. The difference between the capital goods and consumer goods is that the capital goods include the commercial and industrial buildings while the consumer goods involve the private housing. The income gained by capital goods owners is referred to as interest. The United States Bureau of economic analysis is in charge of measuring the number of capital goods produced together with the durable goods orders report.

**Essays on a Mature Economy: Britain After 1840** Deirdre McCloskey, 2013-11-05 These unique papers were originally read at a conference on the new economic history of Britain at Harvard in 1970 and each is accompanied by a summary of the discussion that followed it The participants of the conference represented a broad range of scholars from both sides of the Atlantic The first eleven papers deal with a variety of topics covering a period from 1840 to the 1920s They focus on the performance of the British economy and especially its businessmen during the time of Britain's industrial maturity and relative decline The papers and discussions reached a novel conclusion that contrary to commonly held opinion the British economy performed well and that British businessmen were not lacking in entrepreneurial vigour compared with their German or American counterparts But even more important for British historiography than this finding was the demonstration that economic and statistical methods can be applied successfully to the study of economic history The papers in the concluding section discuss the origins and development of the new economic history and show that as a substantial supplement to work along more traditional lines its methods and application are both desirable and possible This collection

**Hayek's Triangles: Two Essays On The Business Cycle** , The Concept of Equilibrium in Different Economic Traditions Bert Tieben, 2012-07-01

Bert Tieben is very well read in the history of economic thought and provides an overview of one of the basic concepts of economics that is unrivalled both in its scope and in its thoughtful and detailed discussion of the various currents and schools It goes right to the heart of economic theory and asks some pertinent questions about the limits and the future of economic theorizing That is I think what sets it apart from many other studies in the history of economic thought it is history with an eye to the future and it does all this without making any demands on the mathematical skills of the reader This book should therefore appeal to everybody who is interested in the methodology of economics and in exploring the boundaries of economic analysis Hans Visser VU University Amsterdam The Netherlands This book deals with one of the most puzzling concepts in economic science that of economic equilibrium In modern economics equilibrium is considered a key assumption but its role is contested by economists both from within the mainstream and from rival schools of thought What explains the contradictory assessments of the equilibrium concept in economics Do economists belonging to different traditions disagree about the definition of equilibrium or do they adopt different rules for assessing scientific status In this unique and exhaustive study Bert Tieben answers these questions by investigating the history of equilibrium economics from 1700 to the present day He concludes that ideology strongly coloured the development of this branch of theory helping to explain the vehemence of the debates surrounding the concept He also argues that scientific progress in economics may indeed be fostered by such opposition and contention and calls for cross fertilization and stronger cooperation between the different schools of thought This resourceful book will appeal to post graduate students and scholars in the history of economic thought and economic methodology Both neoclassical and heterodox economists most notably Austrian post Keynesian and institutional economists will also find much to interest them
