Progress and Problems in Atmospheric Chemistry John Roger Barker,1995 Atmospheric chemistry is central to understanding global changes ozone depletion appearance of the polar ozone holes and compositional changes which worsen the greenhouse effect Because of its importance work is progressing on many fronts This volume emphasizes the troposphere and stratosphere and has chapters on gas phase condensed phase and heterogeneous chemistry Present progress is emphasized and important future directions are also described This book fills a need not satisfied by any others and will be popular for some years to come It informs students and newcomers to the field of the many facets of atmospheric chemistry and can be used as a text for advanced students It is also a valuable desk reference summarizing activities by quite a number of the most active research groups Chapter 18 by Kolb et al on heterogeneous chemistry is especially noteworthy because it represents a unique joint effort by several groups working on a very timely subject they describe a conceptual framework and establish conventions which will be standard in future papers on this subject **Edinburgh Medical Journal** ,1909

The Problem of

Disenchantment Egil Asprem,2018-05-31 Challenges the conventional view of a disenchanted and secular modernity and recovers the complex relation that exists between science religion and esotericism in the modern world Max Weber famously characterized the ongoing process of intellectualization and rationalization that separates the natural world from the divine by excluding magic and value from the realm of science and reason and fact from the realm of religion as the disenchantment of the world Egil Asprem argues for a conceptual shift in how we view this key narrative of modernity Instead of a sociohistorical process of disenchantment that produces increasingly rational minds Asprem maintains that the continued presence of magic and enchantment in people s everyday experience of the world created an intellectual problem for those few who were socialized to believe that nature should contain no such incalculable mysteries Drawing on a wide range of early twentieth century primary sources from theoretical physics occultism embryology radioactivity psychical research and other fields Asprem casts the intellectual life of high modernity as a synchronic struggle across conspicuously different fields that shared surprisingly similar intellectual problems about value meaning and the limits of knowledge The Problem of Disenchantment is in its entirety extraordinarily well researched argued and written representing at once the most complete and nuanced treatment of the notion of disenchantment within this network of scientific religious philosophical and esoteric discourses and currents Nova Religio *Handbook of Information as to the Various Schools & Courses of Instruction*
