Proceedings of Crack Paths (CP 2009), Vicenza, Italy 2009 , Space, Number, and Geometry from Helmholtz to Cassirer Francesca Biagioli, 2016-08-22 This book offers a reconstruction of the debate on non Euclidean geometry in neo Kantianism between the second half of the nineteenth century and the first decades of the twentieth century Kant famously characterized space and time as a priori forms of intuitions which lie at the foundation of mathematical knowledge The success of his philosophical account of space was due not least to the fact that Euclidean geometry was widely considered to be a model of certainty at his time However such later scientific developments as non Euclidean geometries and Einstein s general theory of relativity called into question the certainty of Euclidean geometry and posed the problem of reconsidering space as an open question for empirical research The transformation of the concept of space from a source of knowledge to an object of research can be traced back to a tradition which includes such mathematicians as Carl Friedrich Gauss Bernhard Riemann Richard Dedekind Felix Klein and Henri Poincaré and which finds one of its clearest expressions in Hermann von Helmholtz s epistemological works Although Helmholtz formulated compelling objections to Kant the author reconsiders different strategies for a philosophical account of the same transformation from a neo Kantian perspective and especially Hermann Cohen s account of the apriority of mathematics in terms of applicability and Ernst Cassirer s reformulation of the a priori of space in terms of a system of hypotheses This book is ideal for students scholars and researchers who wish to broaden their knowledge of non Euclidean geometry or neo Kantianism **Infrared Spectroscopy** Theophanides Theophile, 2012-04-25 The present book is a definitive review in the field of Infrared IR and Near Infrared NIR Spectroscopies which are powerful non invasive imaging techniques This book brings together multidisciplinary chapters written by leading authorities in the area The book provides a thorough overview of progress in the field of applications of IR and NIR spectroscopy in Materials Science Engineering and Technology Through a presentation of diverse applications this book aims at bridging various disciplines and provides a platform for collaborations among scientists *Metal Oxides for Optoelectronics and Optics-Based Medical Applications* Suresh Sagadevan, Jiban Podder, Faruq Mohammad, 2022-07-01 Metal Oxides for Optoelectronics and Optics based Medical Applications reviews recent advances in metal oxides and their mechanisms for optoelectronic photoluminescent and medical applications In addition the book examines the integration of key chemistry concepts with nanoelectronics that can improve performance in a diverse range of applications Sections place a strong emphasis on synthesis processes that can improve the metal oxides physical properties and the reflected surface chemical changes that can impact their performance in various devices like light emitting diodes luminescence materials solar cells etc Finally the book discusses the challenges associated with the handling and maintenance of metal oxides crystalline properties This book will be suitable for academics and those working in R D in industry looking to learn more about cheaper and more effective methods to produce metal oxides for use in the fields of electronics photonics biophotonics

and engineering Reviews the latest advances in the utilization of metal oxide materials in photonics optoelectronics and optics based medical applications Considers the most relevant synthesis strategies for the development of high performing metal oxide based devices Addresses a wide range of metal oxides including photonic crystals fibers metastructures glasses and more

New Trends in Geometric Analysis Antonio Alarcón,Vicente Palmer,César Rosales,2023-10-18 The aim of this book is to provide an overview of some of the progress made by the Spanish Network of Geometric Analysis REAG by its Spanish acronym since its born in 2007 REAG was created with the objective of enabling the interchange of ideas and the knowledge transfer between several Spanish groups having Geometric Analysis as a common research line This includes nine groups at Universidad Aut noma de Barcelona Universidad Aut noma de Madrid Universidad de Granada Universidad Jaume I de Castell n Universidad de Murcia Universidad de Santiago de Compostela and Universidad de Valencia The success of REAG has been substantiated with regular meetings and the publication of research papers obtained in collaboration between the members of different nodes On the occasion of the 15th anniversary of REAG this book aims to collect some old and new contributions of this network to Geometric Analysis The book consists of thirteen independent chapters all of them authored by current members of REAG The topics under study cover geometric flows constant mean curvature surfaces in Riemannian and sub Riemannian spaces integral geometry potential theory and Riemannian geometry among others Some of

these chapters have been written in collaboration between members of different nodes of the network and show the fruitfulness of the common research atmosphere provided by REAG The rest of the chapters survey a research line or present recent progresses within a group of those forming REAG Surveying several research lines and offering new directions in the field the volume is addressed to researchers including postdocs and PhD students in Geometric Analysis in the large

Delirious Kelly Baum, Lucy Bradnock, Tina Rivers Ryan, 2017-09-12 Can postwar art be understood as an exercise in calculated insanity Taking this provocative question as its basis this book explores the art and history of delirium from 1950 to 1980 an era shaped by the brutality of World War II and the rapid expansion of industrial capitalism Skepticism of science and technology along with fear of its capability to promote mass destruction developed into a distrust of rationalism which profoundly influenced the art of the times *Delirious* features work by more than sixty artists from Europe Latin America and the United States including Dara Birnbaum Le n Ferrari Gego Bruce Nauman Howardena Pindell Peter Saul and Nancy Spero Experimenting with irrational subject matter and techniques these artists forged new strategies that directly responded to such unbalanced times Disturbing and challenging the works in this book in multiple media and often counterintuitively incorporating highly ordered and systematic structures upend traditional notions of aesthetic harmony Three wide ranging essays and a richly illustrated plates section investigate the degree to which delirious times demand delirious art inviting readers to think crazy p p1 margin 0 0px 0 0px 0 0px 0 0px font 14 0px Verdana *A Compact & Comprehensive Book of IIT Foundation Maths Class X* ANUBHUTI GANGAL, Full and comprehensive coverage of all topics Key Facts have been given at the beginning of each chapter to facilitate thorough revision and recall Contains a large number of Solved Examples and Practice Questions Answers Hints and Solutions have been provided to boost up the morale and increase confidence level Self Assessment Sheets have been given at the end of each chapter to help the students assess and evaluate their understanding of the concepts *Radiation-induced and oxidative DNA damages* Antonio Monari, Elise Dumont, Chrysostomos Chatgililoglu, 2015-10-02 DNA stores and passes the genetic information of almost all living organisms Its molecular structure and their intramolecular interactions are particularly suitable to maximize stability against oxidative stress and UV light absorption Yet the protection and repair strategies are still error prone DNA lesions are produced including the most complex and highly mutagenic ones An important threat to DNA stability comes from photosensitization i e from the dramatic multiplication of radiation induced defects mediated by the presence of organic or organometallic dyes compared to the direct exposure to UVA radiation Moreover the photo induced production of singlet oxygen generates an extremely high oxidative stress on DNA that in vivo normally results in extended cellular apoptosis Elucidating the processes leading to DNA damages from the production of a simple radical entity to deleterious lesions as well as the opportunities of repair by devoted enzymes is a cornerstone towards the development of more efficient protection strategies Sensitization and selective production of DNA lesions can also be exploited to induce the selective apoptosis of

cancer cells upon exposition to radiation or to oxidative stress for instance in the field of photodynamic therapy The importance and relevance of the field is witnessed by the impressive amount of high level papers dealing with this complex subject and notably tackling the structural elucidation of DNA and DNA drug adducts the mechanisms of formation of DNA lesions including the precise detection of the final lesion products as well as the influence of the lesions on the DNA stability and dynamics and the consequences on the ease of repair Due to the complexity of the field lying at the frontiers between chemistry physics and biology multidisciplinary strategies allying modeling and experience are needed This topic aims at giving an extended overview of the current research in the domain with fundamental contribution from the leading groups in the field of DNA reactivity structural characterization photo chemistry and photo physics as well as repair mechanism It will therefore be a fundamental guide for scientists wanting to address the field of DNA lesion and repair but also more generally for researchers working in rational drug design or in the development of biomarkers and medical imaging techniques
