Classifying Triangles

Classify Triangles by Angles One way to classify a triangle is by the measures of its angles.

- If one of the angles of a triangle is an obtuse angle, then the triangle is an **obtuse triangle**.
- If one of the angles of a triangle is a right angle, then the triangle is a **right triangle**.
- If all three of the angles of a triangle are acute angles, then the triangle is an **acute triangle**.
- If all three angles of an acute triangle are congruent, then the triangle is an **equiangular triangle**.

Example

Classify each triangle.

All three angles are congruent, so all three angles have measure 60° . The triangle is an equiangular triangle.

The triangle has one angle that is obtuse. It is an obtuse triangle.

The triangle has one right angle. It is a right triangle.

Exercise

Classify each triangle as acute, equiangular, obtuse, or right.

Translating Euclid Gerry Stahl,2022-05-31

Translating Euclid reports on an effort to transform geometry for students from a stylus and clay tablet corpus of historical theorems to a stimulating computer supported collaborative learning inquiry experience The origin of geometry was a turning point in the pre history of informatics literacy and rational thought Yet this triumph of human intellect became ossified through historic layers of systematization beginning with Euclid s organization of the Elements of geometry Often taught by memorization of procedures theorems and proofs geometry in schooling rarely conveys its underlying intellectual excitement The recent development of dynamic geometry software offers an opportunity to translate the study of geometry into a contemporary vernacular However this involves transformations along multiple dimensions of the conceptual and practical context of learning Translating Euclid steps through the multiple challenges involved in redesigning geometry education to take advantage of computer support Networked computers portend an interactive approach to exploring dynamic geometry as well as broadened prospects for collaboration The proposed conception of geometry emphasizes the central role of the construction of dependencies as a design activity integrating human creation and mathematical discovery to form a human centered approach to mathematics This book chronicles an iterative effort to adapt technology theory pedagogy and practice to support this vision of collaborative dynamic geometry and to evolve the approach through on going cycles of trial with students and refinement of resources It thereby provides a case study of a design based research effort in computer supported collaborative learning from a human centered informatics perspective *Vulkan Cookbook* Pawel Lapinski,2017-04-28 Work through recipes to unlock the full potential of the next generation graphics API Vulkan Key Features This book explores a wide range of modern graphics programming techniques and GPU compute methods to make the best use of the Vulkan API Learn techniques that can be applied to a wide range of platforms desktop smartphones and embedded devices Get an idea on the graphics engine with multi platform support and learn exciting imaging processing and post processing techniques Book Description Vulkan is the next generation graphics API released by the Khronos group It is expected to be the successor to OpenGL and OpenGL ES which it shares some similarities with such as its cross platform capabilities programmed pipeline stages or nomenclature Vulkan is a low level API that gives developers much more control over the hardware but also adds new responsibilities such as explicit memory and resources management With it though Vulkan is expected to be much faster This book is your guide to understanding Vulkan through a series of recipes We start off by teaching you how to create instances in Vulkan and choose the device on which operations will be performed You will then explore more complex topics such as command buffers resources and memory management pipelines GLSL shaders render passes and more Gradually the book moves on to teach you advanced rendering techniques how to draw 3D scenes and how to improve the performance of your applications By the end of the book you will be familiar with the latest advanced

techniques implemented with the Vulkan API which can be used on a wide range of platforms What you will learn Work with Swapchain to present images on screen Create submit and synchronize operations processed by the hardware Create buffers and images manage their memory and upload data to them from CPU Explore descriptor sets and set up an interface between application and shaders Organize drawing operations into a set of render passes and subpasses Implement geometry projection and tessellation texturing lighting and post processing techniques Write shaders in GLSL and convert them into SPIR V assemblies Who this book is for This book is ideal for developers who know C C languages have some basic familiarity with graphics programming and now want to take advantage of the new Vulkan API in the process of building next generation computer graphics Some basic familiarity of Vulkan would be useful to follow the recipes OpenGL developers who want to take advantage of the Vulkan API will also find this book useful

From Text to 'Lived' Resources Ghislaine Gueudet,Birgit Pepin,Luc Trouche,2011-09-06 What kinds of curriculum materials do mathematics teachers select and use and how This question is complex in a period of deep evolutions of teaching resources with the proficiency of online resources in particular How do teachers learn from these materials and in which ways do they tailor them for their use and pupil learning Teachers collect resources select transform share implement and revise them Drawing from the French term *ing nerie documentaire* we call these processes documentation The literal English translation is to work with documents but the meaning it carries is richer Documentation refers to the complex and interactive ways that teachers work with resources in class and out of class individually but also collectively

Closed Loop Management in Mineral Resource Extraction Jörg Benndorf,2020-02-13 This book describes an innovative closed loop concept that allows the feedback of online data from operational monitoring to create mining intelligence The application of this concept promises significant improvements in economic and environmental key performance indicators for any mining operation Combining theory with industrial case studies the book guides readers through this process by providing theoretical background addressing practical issues related to operational implementation and illustrating the impact on selected examples This new concept is presented using the example of a bulk and gold mining application but is applicable at any mine where grade control is important The book is of interest to industrial professionals involved in operational monitoring mining intelligence and mine planning optimization as well as to researchers and academics in the field of applied geostatistics
