Businesses were worried that competing against private contractors would hurt change their own businesses as well as their growth. They did not understand that private contractors would provide them with information to improve themselves. The business community, therefore, believed it would be unable to do this competition as the competing organizations would be stronger than them.

Meeting the Challenges to Measurement in an Era of Accountability Henry Braun, 2016-01-29 Under pressure and support from the federal government states have increasingly turned to indicators based on student test scores to evaluate teachers and schools as well as students themselves The focus thus far has been on test scores in those subject areas where there is a sequence of consecutive tests such as in mathematics or English language arts with a focus on grades 4-8 Teachers in these subject areas however constitute less than thirty percent of the teacher workforce in a district Comparatively little has been written about the measurement of achievement in the other grades and subjects This volume seeks to remedy this imbalance by focusing on the assessment of student achievement in a broad range of grade levels and subject areas with particular attention to their use in the evaluation of teachers and schools in all It addresses traditional end of course tests as well as alternative measures such as portfolios exhibitions and student learning objectives In each case issues related to design and development psychometric considerations and validity challenges are covered from both a generic and a content specific perspective The NCME Applications of Educational Measurement and Assessment series includes edited volumes designed to inform research based applications of educational measurement and assessment Edited by leading experts these books are comprehensive and practical resources on the latest developments in the field The Open Access version of this book available at <http://www.taylorfrancis.com> has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license

The Large Scale Structure of Space-Time Stephen W. Hawking,George F. R. Ellis,2023-02-16 First published in 1973 this influential work discusses Einstein s General Theory of Relativity to show how two of its predictions arise first that the ultimate fate of many massive stars is to undergo gravitational collapse to form black holes and second that there was a singularity in the past at the beginning of the universe Starting with a precise formulation of the theory including the necessary differential geometry the authors discuss the significance of space time curvature and examine the properties of a number of exact solutions of Einstein s field equations They develop the theory of the causal structure of a general space time and use it to prove a number of theorems establishing the inevitability of singularities under certain conditions A Foreword contributed by Abhay Ashtekar and a new Preface from George Ellis help put the volume into context of the developments in the field over the past fifty years
