**4** Anticipation Guide

## Analyzing Linear Equations

**Step 1** Before you begin Chapter 4

- Read each statement.
- Circle whether you Agree (A) or Disagree (D) with the statement.
- Write A or D in the first column. If you are not sure whether you agree or disagree, write NG (Not Sure).

| STEP 1<br>A, D, or NG | Statement                                                                                                                         | STEP 2<br>A or D |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------|------------------|
|                       | 1. The slope of a line given by an equation in the form $y = mx + b$ can be determined by looking at the equation.                | A                |
|                       | 2. The y-intercept of $y = 15x - 4$ is 5.                                                                                         | D                |
|                       | 3. If two points on a line are known, then an equation can be written for that line.                                              | A                |
|                       | 4. An equation in the form $y = mx + b$ is a point-slope form.                                                                    | D                |
|                       | 5. If a pair of lines are parallel, then they have the same slope.                                                                | A                |
|                       | 6. Lines that intersect at right angles are called perpendicular lines.                                                           | A                |
|                       | 7. A scatter plot is said to have a negative correlation when the points are scattered and show no relation between $x$ and $y$ . | D                |
|                       | 8. The closer the correlation coefficient is to zero, the more closely a line fits the models set of data.                        | D                |
|                       | 9. The equations of a regression line and a median fit line are very similar.                                                     | A                |
|                       | 10. Step functions and absolute value functions are types of piecewise linear functions.                                          | A                |

## Graphing Equations in Slope-Intercept Form

## Slope-Intercept Form

Slope-Intercept Form:  $y = mx + b$ , where  $m$  is the slope and  $b$  is the y-intercept.**Example 1** Write an equation in slope-intercept form for the line with a slope of  $-4$  and a y-intercept of 3.

$$y = mx + b$$

$$y = -4x + 3$$

Slope-intercept form

Substitute  $m$  and  $b$  into the form.**Example 2** Graph  $3x - 4y = 8$ .

Slope-intercept form

Solve for  $y$ . $-4y = -3x + 8$  $y = \frac{3}{4}x - 2$ 

Slope-intercept form

 $y = \frac{3}{4}x - 2$
