The C language provides no built in facilities for performing such common operations as input output memory management
string manipulation and the like Instead these facilities are defined in a standard library which you compile and link with
your programs The GNU C Library described in this document defines all of the library functions that are specified by the
ISO C standard as well as additional features specific to POSIX and other derivatives of the Unix operating system and
extensions specific to GNU systems The purpose of this manual is to explain how to use the facilities of the GNU C Library
We have mentioned which features belong to which standards to help you identify things that are potentially non portable to
other systems But the emphasis in this manual is not on strict portability The GNU C Library Reference Manual Sandra
