Struggling to Make the Grade: A Review of the Causes and Consequences of the Weak Outcomes of South Africa's Education System Mr. Montfort Mlachila, Tlhalefang Moeletsi, 2019-03-01 While South Africa has made significant improvements in basic and tertiary education enrollment the country still suffers from significant challenges in the quality of educational achievement by almost any international metric The paper finds that money is clearly not the main issue since the South Africa's education budget is comparable to OECD countries as a percent of GDP and exceeds that of most peer sub-Saharan African countries in per capita terms The main explanatory factors are complex and multifaceted and are associated with insufficient subject knowledge of some teachers history race language geographic location and socio economic status Low educational achievement contributes to low productivity growth and high levels of poverty unemployment and inequality Drawing on the literature the paper sketches some policy considerations to guide the debate on what works and what does not **EFA Global Monitoring Report - 2013-2014 - Teaching and Learning Achieving quality for all**

UNESCO, 2014-02-04 The 2013 2014 Education for All Global Monitoring Report shows that a lack of attention to education quality and a failure to reach the marginalized have contributed to a learning crisis that needs urgent attention Worldwide 250 million children many of them from disadvantaged backgrounds are not learning the basics Teaching and Learning Achieving Quality for All describes how policy makers can support and sustain a quality education system for all children regardless of background by providing the best teachers The Report also documents global progress in achieving Education for All goals and provides lessons for setting a new education agenda post 2015 In addition the Report identifies that insufficient financing is hindering advances in education **School Libraries in a Time of Change** Kathleen W. Craver, 2019-08-01 By becoming practical futurists school librarians can help their libraries not only to survive sweeping changes in education but to thrive This book shows how to spot technological trends and use them to your library's

advantage During this time of rapid modernization of technology and educational reform this book is a must read for school librarians tasked with ensuring their libraries meet evolving standards This title provides the research and organizational techniques and skills they need to gain seats at the table of the three power committees technology curricula and strategic planning School librarians need to collect and publicize national and local school based evidence that shows the positive correlations between school librarians and student achievement Craver notes correlative sources and provides ideas to employ them to ensure that school librarians remain indispensable In addition acquiring technological skills and becoming expert at their application are paramount for librarians Even more important is the need for librarians to assume sole responsibility for designing and integrating information literacy and critical thinking skills throughout the curriculum Craver analyzes studies that show students inability to discern fact from fiction ads from news and information bias in electronic information sources and recommends six actions that school librarians take to ensure that they become active participants in their future rather than its victims

Rethinking Value-Added Models in Education Audrey Amrein-Beardsley, 2014-04-24 Since passage of the of No Child Left Behind Act in 2001 academic researchers econometricians and statisticians have been exploring various analytical methods of documenting students academic progress over time Known as value added models VAMs these methods are meant to measure the value a teacher or school adds to student learning from one year to the next To date however there is very little evidence to support the trustworthiness of these models What is becoming increasingly evident yet often ignored mainly by policymakers is that VAMs are 1 unreliable 2 invalid 3 nontransparent 4 unfair 5 fraught with measurement errors and 6 being inappropriately used to make consequential decisions regarding such things as teacher pay retention and termination Unfortunately their unintended consequences are not fully recognized at this point either Given such the timeliness of this well researched and thoughtful book cannot be overstated This book sheds important light on the debate surrounding VAMs and thereby offers states and practitioners a highly important resource from which they can move forward in more research based ways

The Shifts and the Shocks Martin Wolf, 2014-09-11 From the chief economic commentator for the Financial Times a brilliant tour d horizon of the new global economy There have been many books that have sought to explain the causes and courses of the financial and economic crisis that began in 2007 The Shifts and the Shocks is not another detailed history of the crisis but is the most persuasive and complete account yet published of what the crisis should teach us about modern economies and economics Written with all the intellectual command and trenchant judgment that have made Martin Wolf one of the world s most influential economic commentators The Shifts and the Shocks matches impressive analysis with no holds barred criticism and persuasive prescription for a more stable future It is a book no one with an interest in global affairs will want to neglect

The Normal Accident Theory of Education Andrew K. Milton, 2014-04-01 Much of the current debate about education too often resembles the blind men describing an elephant apprehending only a particular part of the situation or the process many analysts tell an evocative but incomplete

story The so called reform discussion proceeds with a lack of depth about the nuances and realistic limitations in the institutional order of school This book argues that as regulation of schools moves further up the bureaucratic hierarchy first to state departments of education then to the national department of education the legal and institutional requirements get more intensive but less concretely useful in class rooms This bureaucratization serves to tighten the organizational environment thereby increasing the risk of normal accidents The increasing governmental management in other words makes it more likely that schools will fail to meet their goals Analyses of education are too often developed for public consumption in a fast moving political world This book examines some of the deeper organizational reasons why things don't work so well in school as well as a look at some of things that do work Most importantly the book will explain how the social and cultural expectations of what schools can do may create unrealistic hopes We as a society and schools as institutions embrace these unreasonably high hopes at our collective peril Check out Andrew's latest interview with Seattle Radio <http://kiroradio.com/listen/9972862>

Shadow Education and Social Inequalities in Japan Steve R. Entrich, 2017-12-07 This book examines why Japan has one of the highest enrolment rates in cram schools and private tutoring worldwide It sheds light on the causes of this high dependence on shadow education and its implications for social inequalities The book provides a deep and extensive understanding of the role of this kind of education in Japan It shows new ways to theoretically and empirically address this issue and offers a comprehensive perspective on the impact of shadow education on social inequality formation that is based on reliable and convincing empirical analyses Contrary to earlier studies the book shows that shadow education does not inevitably result in increasing or persisting inequalities but also inherits the potential to let students overcome their status specific disadvantages and contributes to more opportunities in education Against the background of the continuous expansion and the convergence of shadow education systems across the globe the findings of this book call for similar works in other national contexts particularly Western societies without traditional large scale shadow education markets The book emphasizes the importance and urgency to deal with the modern excesses of educational expansion and education as an institution in which the shadow education industry has made itself seemingly indispensable

Food and Cooking Skills Education Anita Tull, 2018-01-29 Food and Cooking Skills Education FCSE is a complex mix of policy and practicality educational theory and pedagogy classroom and government policy This book shows how FCSE has been at the centre of a tussle between education and policy for decades It reviews how FCSE has grappled with various significant issues of concern that threaten to marginalise it and pose problems for educational practicalities as expectations are increased but resources are squeezed It assesses the debate about the significance and importance of acquiring practical food and cooking skills in a society where the purchase of ready made food has become commonplace and public knowledge of where our food comes from is noticeably lacking This has contributed to the escalating incidence of diet related diseases and the attendant cost to society and threatened environmental sustainability In turn governments have

reacted by proposals to make practical cooking skills a statutory National Curriculum subject as part of the armoury for tackling such costs Based on detailed research conducted across England and Wales as well as comparisons with thirty five other countries or states the author makes recommendations for policy to manage this challenge facing contemporary society
