P 178 Name an advantage to each model: the ball-and-stick model and the space-filling model.

A ball and stick model shows bond length, and a space-filling model shows relative atom sizes.

P 180 How is the hardness of minerals explained by minerals' chemical structure?

The hardness of minerals is explained by the fact that their chemical structure consists of rigid networks of bonded atoms.

Section 1 Review page 182

1. Classify the following substances as mixtures or compounds

- air: mixture
- CO: compound
- SnF₂: compound
- pure water: compound

2. Draw a ball and stick model of a boron trifluoride, BF₃, molecule. In this molecule, a boron atom is attached to three fluorine atoms. Each F-B-F bond angle is 120 degrees, and all B-F bonds are the same length.

3. Explain why silver iodide, AgI, a compound used in photography, has a much higher melting point than vanillin, C₈H₈O₃, a sweet-smelling compound used in flavoring.

Silver iodide has a much higher attraction between particles, a structure of positive of negative ions. Vanillin consists of molecules.

4. Explain why glass, which is made of mostly SiO₂, is often used to make cookware.

SiO₂ has a high melting point. It does not melt when heated to high cooking temperatures.

5. Predict which molecules have a greater attraction for each other: C₃H₈O molecules in liquid rubbing alcohol or CH₄ molecules in methane gas.

The C₃H₈O have a greater attraction than the CH₄ because they are closer together and they are moving more slowly than those in a gas.

6. A pictometer (pm) is equal to 1×10^{-12} m. The O-H bond lengths in water are 95.8 pm, while S-H bond lengths in dihydrogen sulfide are 135 pm. Why are S-H bonds longer than O-H bonds?

The sulfur atoms are larger than oxygen atoms by one electron energy level.

P 184: What holds two ionic bonded atoms together?

In an ionic bond, ions are held together by the attraction between their opposite charges.

P 186: What holds two covalently bonded atoms together?

Introduction to Physical Geography of the eBook Understanding Physical Geography This eBook was written for students
taking introductory Physical Geography taught at a college or university For the chapters currently available on Google Play
presentation slides Powerpoint and Keynote format and multiple choice test banks are available for Professors using my
eBook in the classroom Please contact me via email at Michael Pidwirny ubc ca if you would like to have access to these
resources The various chapters of the Google Play version of Understanding Physical Geography are FREE for individual use
in a non classroom environment This has been done to support life long learning However the content of Understanding
Physical Geography is NOT FREE for use in college and university courses in countries that have a per capita GDP over 25
000 US dollars per year where more than three chapters are being used in the teaching of a course More specifically for
university and college instructors using this work in such wealthier countries in a credit based course where a tuition fee is
accessed students should be instructed to purchase the paid version of this content on Google Play which is organized as one
of six Parts organized chapters One exception to this request is a situation where a student is experiencing financial hardship
In this case the student should use the individual chapters which are available from Google Play for free The cost of these
Parts works out to only 0 99 per chapter in USA dollars a very small fee for my work When the entire textbook 30 chapters is
finished its cost will be only 29 70 in USA dollars This is far less expensive than similar textbooks from major academic
publishing companies whose eBook are around 50 00 to 90 00 Further revenue generated from the sale of this academic
textbook will provide the carrot to entice me to continue working hard creating new and updated content Thanks in advance
to instructors and students who abide by these conditions IMPORTANT This Google Play version is best viewed with a
