Driessen, Antoine Suarez, 2012-12-06 On January 22 1990 the late John Bell held at CERN European Laboratory for Particle Physics Geneva a seminar organized by the Center of Quantum Philosophy that at this time was an association of scientists interested in the interpretation of quantum mechanics In this seminar Bell presented once again his famous theorem Thereafter a discussion took place in which not only physical but also highly speculative epistemological and philosophical questions were vividly debated The list of topics included assumption of free will in Bell's theorem the understanding of mind the relationship between the mathematical and the physical world the existence of unobservable causes and the limits of human knowledge in mathematics and physics Encouraged by this stimulating discussion some of the participants decided to found an Institute for Interdisciplinary Studies IIS to promote philosophical and interdisciplinary reflection on the advances of science Meanwhile the IIS has associated its activities with the Swiss foundation Fondation du Leman and the Dutch foundation Stichting Instudo registered in Geneva and Amsterdam respectively With its activities the IIS intends to strengthen the unity between the professional activities in science and the reflection on fundamental philosophical questions In addition the interdisciplinary approach is expected to give a contribution to the progress of science and the socio economic development At present three working groups are active within the IIS i.e. the Center for Quantum Philosophy the Wealth Creation and Sustainable Development Group the Neural Science Group **Dreams of Earth and Sky** Freeman Dyson, 2015-04-21 In this sequel to *The Scientist as Rebel* 2006 Freeman Dyson whom *The Times* of London calls one of the world's most original minds celebrates openness to unconventional ideas and the spirit of joyful dreaming in which he believes that science should be pursued Throughout these essays which range from the creation of the Royal Society in the seventeenth century to the scientific inquiries of the Romantic generation to recent books by Daniel Kahneman and Malcolm Gladwell he seeks to break down the barriers that separate science from other sources of human wisdom Dyson discusses twentieth century giants of physics such as Richard Feynman J. Robert Oppenheimer Paul Dirac and Steven Weinberg many of whom he knew personally as well as Winston Churchill's pursuit of nuclear weapons for Britain and Wernher von Braun's pursuit of rockets for space travel And he takes a provocative often politically incorrect approach to some of today's most controversial scientific issues global warming the current calculations of which he thinks are probably wrong the future of biotechnology which he expects to dominate our lives in the next half century as the tools to design new living creatures become available to everyone and the flood of information in the digital age Dyson offers fresh perspectives on the history the philosophy and the practice of scientific inquiry and even on the blunders the wild guesses and wrong theories that are also part of our struggle to understand the
