

Chapter 5

Redesigning the organization with information system

5.1 System as planned organizational change

An information system is a socio-technical entity, an arrangement of both technical and social elements, the introduction of a new information system involves more than new hardware and software. IT also includes changes in jobs skills management and organization. In the socio technical philosophy, one cannot install new technology without considering the people who must work with it. When we design a new information system, we are re-designing organization.

One important thing to know about building a new information system is that this process is one kind of planned organizational change. System builders must understand how a system will affect the organization as a whole, focusing particularly the organizational conflict and changes in the locus of decision making. Managers must also consider how the nature of work group will change under the new system. Systems can be technical successes but organizational failure because of a failure in the social and political process of building the system. Analyst and designer are responsible for ensuring that key participants (members) of the organization participate in the design process are permitted to influence the system ultimate shape.

5.2 Linking Information System to Business Plan

Deciding which new system to build be an essential component of the organizational planning process. Organization need to develop an information systems plan that supports their overall business plan. One specific project have been selected within the overall context of a strategic plan for the nosiness and the systems area, an information system plan can be developed. The plan serves as road map indicating the direction of systems development, the rationale, the current situation, the management strategy, the implementation plan, and the budget.

How to develop an Information System Plan

A good information system plan should address the following topics

1. Purpose of the plan

- Overview of plans content
- Changes in firm's current situation
- Firms strategic plan
- Current business organization and future organization
- Key business processes
- Management strategy

2. Strategic business plan

Requirements Aybüke Aurum,Claes Wohlin,2006-04-07 Requirements engineering is the process by which the requirements for software systems are gathered analyzed documented and managed throughout their complete lifecycle Traditionally it has

been concerned with technical goals for functions of and constraints on software systems Aurum and Wohlin however argue that it is no longer appropriate for software systems professionals to focus only on functional and non functional aspects of the intended system and to somehow assume that organizational context and needs are outside their remit Instead they call for a broader perspective in order to gain a better understanding of the interdependencies between enterprise stakeholders processes and software systems which would in turn give rise to more appropriate techniques and higher quality systems Following an introductory chapter that provides an exploration of key issues in requirements engineering the book is organized in three parts Part 1 presents surveys of state of the art requirements engineering process research along with critical assessments of existing models frameworks and techniques Part 2 addresses key areas in requirements engineering such as market driven requirements engineering goal modeling requirements ambiguity and others Part 3 concludes the book with articles that present empirical evidence and experiences from practices in industrial projects Its broader perspective gives this book its distinct appeal and makes it of interest to both researchers and practitioners not only in software engineering but also in other disciplines such as business process engineering and management science

Behavioral Consequences of Dynamic Pricing David Prakash, 2022-08-19 Digital technologies are driving the application of dynamic pricing Today this pricing strategy is used not only for perishable products such as flights or hotel rooms but for almost any product or service category With dynamic pricing retailers frequently adjust their prices over time to respond to factors such as demand their supply and that of competitors or the time of sale Additionally dynamic pricing allows retailers to take advantage of a large share of consumers willingness to pay while avoiding losses from unsold products Ultimately this can lead to an increase in revenue and profit However the application of dynamic pricing comes with great challenges In addition to the technological

implementation companies have to take into account that dynamic pricing can cause complex and unintended behavioral consequences on the consumer side The key objective of this dissertation is to provide a deeper understanding of the impact of dynamic pricing on consumer behavior To this end this dissertation presents insights from four perspectives First how reference prices as a critical component in purchase decisions are operationalized Second how customers search for products priced dynamically differentiated by business and private customers as well as by different devices used for the search Third whether and how dynamic pricing influences the impact of internal reference prices on purchase decisions Finally this dissertation demonstrates that consumers perceive price changes as personalized in different purchase contexts leading to reduced perceptions of fairness and undesirable behavioral consequences Handbook On Business Information Systems Angappa Gunasekaran, Maqsood Sandhu, 2010-04-27 This handbook covers the vast field of business information systems focusing particularly on developing information systems to capture and integrate information technology together with the people and their businesses Part I of the book Health Care Information Systems focuses on providing global leadership for the optimal use of health care information technology IT It provides knowledge about the best use of information systems for the betterment of health care services Part II Business Process Information Systems extends the previous theory in the area of process development by recognizing that improvements in intra organizational business processes need to be complemented by corresponding improvements in inter organizational processes Part III deals with Industrial Data and Management Systems and captures the main challenges faced by the industry such as the changes in the operations paradigm of manufacturing and service organizations Finally Part IV Evaluation of Business Information Systems discusses the empirical investigation into the adoption of systems development methodologies and the security pattern of the business systems along with the mathematical models Management Information Systems Vladimir Zwass, 1992
