

Figure 3-6. Hydraulic System Check

REMOVAL

- Place master battery switch in the OFF position.
- Disconnect the two electrical leads and label for identification. Tape ends of the two electrical leads to prevent shorting.
- Disconnect ground wire from the airframe.
- Screw vent port screw down tight to prevent hydraulic fluid leakage.
- Disconnect the hydraulic lines from the hydraulic power pack. Cap lines to prevent contamination.
- Remove hydraulic power pack by removing four attaching bolts, washers, grommets, bushings and nuts.

INSTALLATION

- Place hydraulic power pack in place and attach with bolts, washers, grommets, bushings and nuts.
- Connect hydraulic lines to the hydraulic power pack.
- Connect ground wire to the airframe.
- Connect the two electrical leads.
- Clear vent port by backing screw and washer

out to allow a 0.06 inch minimum clearance between power pack boss and bottom of rubber washer seal.

EMERGENCY EXTENSION VALVE

An emergency extension valve is located at the left forward side of the center console. This valve bypasses hydraulic fluid from the upside of the actuators (which form the hydraulic uplock) directly to the reservoir. The gears drop by gravity, and the piston locks mechanically engage. The gears cannot be raised, and the piston down lock cannot become disengaged.

EMERGENCY EXTENSION FREE-FALL TEST. With the aircraft on jacks, retract the landing gear and place the throttle in midposition. Apply a five and one-half pound weight to the axle of the nose landing gear to simulate an air load (see Figure 3-6).

- Disconnect hydraulic power pack unit at the electrical quick disconnect.
- Place landing gear selector switch in DOWN position.

Manual Commander 114

JR Anderson
