working memory activity fewer publications deal with the application of this research with respect to single trial detection and real time estimation of cognitive functions in complex realistic scenarios Single trial classifiers based on brain activity measurements such as electroencephalography functional near infrared spectroscopy physiological signals or eye tracking have the potential to classify affective or cognitive states based upon short segments of data For this purpose signal processing and machine learning techniques need to be developed and transferred to real world user interfaces The goal of this Frontiers Research Topic was to advance the State of the Art in signal based modeling of cognitive processes We were especially interested in research towards more complex and realistic study designs for example collecting data in the wild or investigating the interaction between different cognitive processes or signal modalities Bringing together many contributions in one format allowed us to look at the state of convergence or diversity regarding concepts methods and paradigms

*Bone Quantitative Ultrasound* Pascal Laugier, Quentin Grimal, 2022-05-05 Many significant achievements in new ultrasound technologies to measure bone and models to elucidate the interaction and the propagation of ultrasonic waves in complex bone structures have been reported over the past ten years Impaired bone remodeling affects not only the trabecular compartment but also the cortical one Despite the crucial contribution of the cortical structure to the whole bone mechanical competence cortical bone was understudied for a long time A paradigm shift occurred around 2010 with a special focus placed on the importance of cortical bone This has sparked a great deal of interest in new ultrasound techniques to assess cortical bone While our book *Bone Quantitative Ultrasound* published in 2011 emphasized techniques to measure trabecular bone this new book is devoted for a

large part to the technologies introduced recently to measure cortical bone. These include resonant ultrasound spectroscopy, guided waves scattering and pulse echo and tomography imaging techniques. Instrumentation, signal processing techniques and models used are detailed. Importantly, the data accumulated in recent years such as anisotropic stiffness, elastic engineering moduli, compression and shear wave speeds of cortical bones from various skeletal sites are presented comprehensively. A few chapters deal with the recent developments achieved in quantitative ultrasound of trabecular bone. These include i) scattering based approaches and their application to measure skeletal sites such as the spine and proximal femur and ii) approaches exploiting the poro elastic nature of bone. While bone fragility and osteoporosis are still the main motivation for developing bone QUS, this Book also includes chapters reporting ultrasound techniques developed for other applications of high interest such as 3 D imaging of the spine, assessment of implant stability and transcranial brain imaging. This book together with the book *Bone Quantitative Ultrasound* published in 2011 will provide a comprehensive overview of the methods and principles used in bone quantitative ultrasound and will be a benchmark for all novice or experienced researchers in the field. The book will offer recent experimental results and theoretical concepts developed so far and would be intended for researchers, graduate or undergraduate students, engineers and clinicians who are involved in the field. The book should be considered as a complement to the first book published in 2011 rather than a second edition in the sense that basic notions already presented in the first book are not repeated.

Advances in Renewable Energies Offshore Carlos Guedes Soares, 2018-10-03 *Advances in Renewable Energies Offshore* is a collection of the papers presented at the 3rd International Conference on Renewable Energies Offshore RENEW 2018 held in Lisbon Portugal on 8-10 October 2018. The 104 contributions were written by a diverse international group of authors and have been reviewed by an International Scientific Committee. The book is organized in the following main subject areas: Modelling tidal currents, Modelling waves, Tidal energy devices design, applications and experiments, Tidal energy arrays, Wave energy devices, point absorber, multibody applications, control experiments, CFD, coastal OWC, OWC and turbines, Wave energy arrays, Wind energy devices, Wind energy arrays, Maintenance and reliability, Combined platforms, Moorings and Flexible materials. *Advances in Renewable Energies Offshore* collects recent developments in these fields and will be of interest to academics and professionals involved in the above mentioned areas.
