**Exercises in Numerical Linear Algebra and Matrix Factorizations** Tom Lyche, Georg Muntingh, Øyvind Ryan, 2020-11-02 To put the world of linear algebra to advanced use it is not enough to merely understand the theory there is a significant gap between the theory of linear algebra and its myriad expressions in nearly every computational domain To bridge this gap it is essential to process the theory by solving many exercises thus obtaining a firmer grasp of its diverse applications Similarly from a theoretical perspective diving into the literature on advanced linear algebra often reveals more and more topics that are deferred to exercises instead of being treated in the main text As exercises grow more complex and numerous it becomes increasingly important to provide supporting material and guidelines on how to solve them supporting students learning process This book provides precisely this type of supporting material for the textbook Numerical Linear Algebra and Matrix Factorizations published as Vol 22 of Springer's Texts in Computational Science and Engineering series Instead of omitting details or merely providing rough outlines this book offers detailed proofs and connects the solutions to the corresponding results in the textbook For the algorithmic exercises the utmost level of detail is provided in the form of MATLAB implementations Both the textbook and solutions are self contained This book and the textbook are of similar length demonstrating that solutions should not be considered a minor aspect when learning at advanced levels
