Measuring Scholarly

Impact Ying Ding, Ronald Rousseau, Dietmar Wolfram, 2014-11-06 This book is an authoritative handbook of current topics technologies and methodological approaches that may be used for the study of scholarly impact The included methods cover a range of fields such as statistical sciences scientific visualization network analysis text mining and information retrieval The techniques and tools enable researchers to investigate metric phenomena and to assess scholarly impact in new ways Each chapter offers an introduction to the selected topic and outlines how the topic technology or methodological approach may be applied to metrics related research Comprehensive and up to date Measuring Scholarly Impact Methods and Practice is designed for researchers and scholars interested in informetrics scientometrics and text mining The hands on perspective is also beneficial to advanced level students in fields from computer science and statistics to information science Science

Dynamics and Research Production Nikolay K. Vitanov, 2016-08-01 This book deals with methods to evaluate scientific productivity In the book statistical methods deterministic and stochastic models and numerous indexes are discussed that will help the reader to understand the nonlinear science dynamics and to be able to develop or construct systems for appropriate evaluation of research productivity and management of research groups and organizations The dynamics of science structures and systems is complex and the evaluation of research productivity requires a combination of qualitative and quantitative methods and measures The book has three parts The first part is devoted to mathematical models describing the importance of science for economic growth and systems for the evaluation of research organizations of different size The second part contains descriptions and discussions of numerous indexes for the evaluation of the productivity of researchers and groups of researchers of different size up to the comparison of research productivities of research communities of nations Part three contains discussions of non Gaussian laws connected to scientific productivity and presents various deterministic and stochastic models of science dynamics and research productivity The book shows that many famous fat tail distributions as well as many deterministic and stochastic models and processes which are well known from physics theory of extreme events or population dynamics occur also in the description of dynamics of scientific systems and in the description of the characteristics of research productivity This is not a surprise as scientific systems are nonlinear open and dissipative

The Routledge Reviewer's Guide to Mixed Methods Analysis Anthony J. Onwuegbuzie, R. Burke Johnson, 2021-07-12 The Routledge Reviewer's Guide to Mixed Methods Analysis is a groundbreaking edited book the first devoted solely to mixed methods research analyses or mixed analyses Each of the 30 seminal chapters authored by internationally renowned scholars provides a simple and practical introduction to a method of mixed analysis Each chapter demonstrates how to conduct the analysis in easy to understand language Many of the chapters present new topics that have never been written before and all chapters offer cutting edge approaches to analysis The book contains the following four sections Part I Quantitative

Approaches to Qualitative Data e.g. factor analysis of text, multidimensional scaling of qualitative data
Part II Qualitative Approaches to Quantitative Data e.g. qualitzing data, mixed methodological discourse analysis
Part III Inherently Mixed Analysis Approaches e.g. qualitative comparative analysis, mixed methods, social network analysis, social media analytics as mixed analysis, GIS as mixed analysis and
Part IV Use of Software for Mixed Data Analysis e.g. QDA Miner, WordStat, MAXQDA, NVivo, SPSS
The audience for this book includes a) researchers, evaluators and practitioners who conduct a variety of research projects and who are interested in using innovative analyses that will allow them to extract more from their data, b) academics including faculty who would use this book in their scholarship as well as in their graduate level courses and graduate students who need access to a comprehensive set of mixed analysis tools for their dissertations, theses and other research assignments and projects and c) computer assisted data analysis software developers who are seeking additional mixed analyses to include within their software programs

Predicting the Dynamics of Research Impact Yannis Manolopoulos, Thanasis Vergoulis, 2021-09-22
This book provides its readers with an introduction to interesting prediction and science dynamics problems in the field of Science of Science. Prediction focuses on the forecasting of future performance or impact of an entity, either a research article or a scientist, and also the prediction of future links in collaboration networks or identifying missing links in citation networks. The single chapters are written in a way that help the reader gain a detailed technical understanding of the corresponding subjects, the strengths and weaknesses of the state of the art approaches for each described problem and the currently open challenges. While chapter 1 provides a useful contribution in the theoretical foundations of the fields of scientometrics and science of science, chapters 2-4 turn the focal point to the study of factors that affect research impact and its dynamics. Chapters 5-7 then focus on article level measures that quantify the current and future impact of scientific articles. Next, chapters 8-10 investigate subjects relevant to predicting the future impact of individual researchers. Finally, chapters 11-13 focus on science evolution and dynamics leveraging heterogeneous and interconnected data where the analysis of research topic trends and their evolution has always played a key role in impact prediction approaches and quantitative analyses in the field of bibliometrics. Each chapter can be read independently since it includes a detailed description of the problem being investigated along with a thorough discussion and study of the respective state of the art. Due to the cross disciplinary character of the Science of Science field, the book may be useful to interested readers from a variety of disciplines like information science, information retrieval, network science, informetrics, scientometrics and machine learning, to name a few. The profiles of the readers may also be diverse, ranging from researchers and professors in the respective fields to students and developers being curious about the covered subjects.
