

Experiment 9: Electromagnetic Induction

I. Using PHet to learn about electromagnetic induction

- A. In the folder for this experiment on the D2L site, download the file `faradaysLaw.jar`. This is another simulation from our friends at PhET - University of Colorado. Become acquainted with the simulation by moving the bar magnet around.
- B. Make sure the 1 coil radio button is pressed and that the magnetic field lines are showing. The voltage meter shows a positive and negative sign which represents the direction of the current flowing in the wires.
- C. With the North side of the magnet on the left, place the bar magnet such that its center is in the center of the coil as shown below. Leave it there motionless for 5 seconds.

- D. What is the reading on the voltage meter and is the bulb bright? Now click on the bar magnet, and at a steady pace, move the magnet to the right just outside of the coil as shown below.

- E. What happened on the voltage meter and to the light bulb while the motion was taking place? What was the sign of the current shown on the voltage meter? What happened to the voltage meter and light bulb once the magnet was at rest on the outside of the coil. Procedures D and E simulated the upper left situation from Figure 1 in the pre-lab.
- F. Repeat the procedure for the other three scenarios in Figure 1, making sure to record the sign of the current induced and the light bulb's reaction to the movement.
- G. What can be said about the motion that is required to turn the light bulb on?
- H. If you look at equation (1) in the introduction, what variable in that equation takes into account the motion of the bar magnet and why?

Checkpoint 1! Please have your lab notebook checked before moving on to the second activity to be sure you have collected enough data to justify your claim.

Electricity And Magnetism Phet Lab Answers:

Brain-powered Science Thomas O'Brien, 2010 How can a long metal needle pass through a balloon without popping it How can water flow at very different rates through two identical funnels How can a stick placed on a table under several sheets of newspaper and extended over the edge of a table snap when quickly struck without lifting or tearing the paper Author Thomas O'Brien takes these and 30 more science inquiry activities to a higher level in this book for educators who love to surprise and challenge their students with unanticipated results Using experiments based on the science of a discrepant event an experiment or demonstration in which the outcome is not what students expect O'Brien shows how learners can be motivated to reconsider their preconceived notions and think more closely about what has actually occurred and the underlying scientific explanations What makes this volume more valuable than a mere activity book is the addition of a science education component to the extensive science content found in each activity Each discrepant event is shown to be analogous to a pedagogical principle Speaking directly to teachers O'Brien writes Your participation as teacher as learner experimenter rather than simply passive reader in these minds on activities will lead you to question and help you to revise your implicit assumptions about the nature of science teaching and learning At the same time you will develop expertise with activities that you can use with your own students The dual purpose activities thus allow you to unlock two doors with one key the doors to your own learning and to your students learning The detailed analogies between the activities and science learning make the book an ideal resource for middle and high school teachers science teacher educators and their preservice students and professional development specialists alike This thorough and thought provoking text includes more than 200 up to date internet resources as well as extensions to each of the physical science biology and chemistry activities bringing the total number of inquiry activities to nearly 120 Most important the author reminds teachers that the study of science is full of surprises and should be both meaningful and fun for students
