Laboratory Methods in Dynamic Electroanalysis M. Teresa Fernández Abedul, 2019-10-13 Laboratory Methods in Dynamic Electroanalysis is a useful guide to introduce analytical chemists and scientists of related disciplines to the world of dynamic electroanalysis using simple and low cost methods The trend toward decentralization of analysis has made this fascinating field one of the fastest growing branches of analytical chemistry As electroanalytical devices have moved from conventional electrochemical cells 10-20 mL to current cells e.g. 5-50 mL based on different materials such as paper or polymers that integrate thick or thin film electrodes interesting strategies have emerged such as the combination of microfluidic cells and biosensing or nanostructuring of electrodes This book provides detailed easy procedures for dynamic electroanalysis and covers the main trends in electrochemical cells and electrodes including microfluidic electrodes electrochemical detection in microchip electrophoresis nanostructuring of electrodes development of bio enzymatic immuno and DNA assays paper based electrodes interdigitated array electrodes multiplexed analysis and combination with optics Different strategies and techniques amperometric voltammetric and impedimetric are presented in a didactic practice based way and a bibliography provides readers with additional sources of information Provides easy to implement experiments using low cost simple equipment Includes laboratory methodologies that utilize both conventional designs and the latest trends in dynamic electroanalysis Goes beyond the fundamentals covered in
