Tallón-Ballesteros, 2022-01-19 It is almost impossible to imagine life today without the electronics communications and networks we have all come to take for granted. The CECNet series is now an established annual event attracting participants in the interrelated fields of electronics, computers, communications and wireless communications engineering and technology from around the world. Careful review by program committee members who took into consideration the breadth and depth of those research topics that fall within the scope of CECNet resulted in the selection of the 88 papers presented here from the 325 submissions received. This represents an acceptance rate of around 27%. Providing an overview of current research and developments in these rapidly evolving fields, the book will be of interest to all those working with digital communications networks. *Simulation and Modeling Methodologies, Technologies and Applications* Mohammad S.
