Handbook of Research on Developing Competencies for Pre-Health Professional Students, Advisors, and Programs Ganjoo, Rohini, Schwartz, Lisa S., 2022-05-27 Today there is a significant need for healthcare professionals across disciplines

and sectors as the world faces unprecedented health challenges and adopts innovative healthcare technologies. Despite this demand for a competent and eager healthcare workforce, the education and processes to becoming a qualified healthcare professional are complex and intricate, which may turn people away from this path due to confusion, fear, or doubt. In order to encourage and support those involved in medical education, further study on the best practices and challenges of developing confident and capable health professionals is required. *The Handbook of Research on Developing Competencies for Pre-Health Professional Students, Advisors, and Programs* provides insight into the critical skills and expertise essential for those interested in pursuing employment in healthcare, as well as current procedures and training to support them during their academic and professional careers. Covering topics such as lifelong learning skills, healthcare professions, and strategic learning, this major reference work is crucial for advisors, nurses, healthcare professionals, academicians, researchers, practitioners, scholars, instructors, and students.

Teaching Primary Science Constructively Keith Skamp, Christine Preston, 2024-08-01. *Teaching Primary Science Constructively* helps pre-service teachers to create effective science learning experiences for primary students by using a constructivist approach to learning. This best-selling text explains the principles of constructivism, the implications for learning and teaching, and discusses core strategies for developing science understanding and science inquiry processes and skills. Part 2 provides research-based ideas for implementing a constructivist approach within a number of content strands. Throughout, there are strong links to the key ideas, themes, and terminology of the latest Australian Curriculum: Science.

Understanding Young People's Science Aspirations Louise Archer, Jennifer DeWitt, 2016-08-12. *Understanding Young People's Science Aspirations* offers new evidence and understanding about how young people develop their aspirations for education, learning, and ultimately careers in science. Integrating new findings from a major research study with a wide-ranging review of existing international literature, it brings a distinctive sociological analytic lens to the field of science education. The book offers an explanation of how some young people do become dedicated to follow science and what might be done to increase and broaden this population, exploring the need for increased scientific literacy among citizens to enable them to exercise agency and lead a life underpinned by informed decisions about their own health and their environment. Key issues considered include why we should study young people's science aspirations, the role of families, social class, and science capital in career choice, the links between ethnicity, gender, and science aspirations, the implications for research, policy, and practice. Set in the context of widespread international policy concern about the urgent need to improve, increase, and diversify participation in post-16 science, this key text considers how we must encourage a supply of appropriately qualified future scientists and workers in STEM industries and ensure a high level of scientific literacy in society. It is a crucial read for all training and practicing science teachers, education researchers, and academics, as well as anyone invested in the desire to help fulfil young people's science aspirations.

Examining Pedagogical Content Knowledge Julie Gess-Newsome, Norman G. Lederman, 2006-04-11 Since its emergence over two decades ago the construct of pedagogical content knowledge PCK has significantly impacted preservice and inservice teacher education educational policy and educational research PCK has served to refocus educators attention on the important role of subject matter in educational practice and away from the more generic approach to teacher education that dominated the field prior to 1975 This ambitious text is the first of its kind to summarize the theory research and practice related to pedagogical content knowledge The audience is provided with a functional understanding of the basic tenets of the construct as well as its applications to research on science teacher education and the development of science teacher education programs The authors are prominent educators representing a variety of subject matter areas and K 12 grade levels Although the focus of the text is science education it should provide valuable reading for any individuals with interests in professional teacher education

Using Multimodal Representations to Support Learning in the Science Classroom Brian Hand, Mark

McDermott, Vaughan Prain, 2015-11-06 This book provides an international perspective of current work aimed at both clarifying the theoretical foundations for the use of multimodal representations as a part of effective science education pedagogy and the pragmatic application of research findings to actual classroom settings. Intended for a wide ranging audience from science education faculty members and researchers to classroom teachers, school administrators and curriculum developers, the studies reported in this book can inform best practices in K-12 classrooms of all science disciplines and provide models of how to improve science literacy for all students. Specific descriptions of classroom activities aimed at helping infuse the use of multimodal representations in classrooms are combined with discussion of the impact on student learning. Overarching findings from a synthesis of the various studies are presented to help assert appropriate pedagogical and instructional implications as well as to suggest further avenues of research.
