Following an introduction that places Einstein's work in the context of his life and times, the book opens with essays on the papers of Einstein's miracle year 1905 covering Brownian motion, light quanta and special relativity as well as his contributions to early quantum theory and the opposition to his light quantum hypothesis. Further essays relate Einstein's path to the general theory of relativity 1915 and the beginnings of two fields it spawned: relativistic cosmology and gravitational waves. Essays on Einstein's later years examine his unified field theory program and his critique of quantum mechanics. The closing essays explore the relation between Einstein's work and twentieth century philosophy as well as his political writings. **Progress in Physics, vol. 2/2009** Dmitri Rabounski, Florentin Smarandache, Larissa Borissova, Progress in Physics has been created for publications on advanced studies in theoretical and experimental physics including related themes from mathematics.
