### **Rethinking Faecal Sludge Management in Emergency Settings**

Fiona Zakaria,2019-07-24 The development of technology in the emergency sanitation sector has not been emphasised sufficiently considering that the management of human excreta is a basic requirement for every person The lack of technology tailored to emergency situations complicates efforts to cater for sanitation needs in challenging humanitarian crisis Concerns persists on the lack of faecal sludge management that considers the whole sanitation chain from containment until treatment This study focused on the development of a smart emergency toilet termed the eSOS emergency sanitation operation system smart toilet to address the limitation in technical options This toilet is based on the eSOS concept that takes into account the entire sanitation chain This study also addresses the limited time for planning in emergencies by developing a decision support system DSS to help quick selection of optimal sanitation options The aim was to enable users of the DSS to plan their emergency sanitation response within the shortest time possible The study aims to contribute toward a better emergency sanitation response by application of technology advances

Water, Sustainable Development and the Nexus Velma I. Grover,Amani Alfarra,2019-08-30 Water is intricately linked with food security energy security and sustainable development As the world is moving towards sustainable development goals it is critical to recognize the role of water in attaining these goals The Water Energy Food Nexus draws attention to the complex and interrelated nature of global resource systems and forces us to think about how a decision in one sector impacts other interlinked sectors as well This book looks at the three dimensions of sustainable developmentenvironment economics and society and how water is linked with them and explores the nexus approach as a framework to look at the issues and identify solutions

**Novel Concepts, Systems and Technology for Sludge Management in Emergency and Slum Settings** Peter Mawioo,2020-02-07 Management of sludge is one of the most pressing issues in sanitation provision The situation is especially complex when large quantities of fresh sludge containing various contaminants are generated in onsite sanitation systems in urban slums emergency settlements and wastewater treatment facilities that require proper disposal of the sludge The application of fast and efficient sludge management methods is important under these conditions This study focused on the development of an innovative sludge treatment unit that is based on the microwave irradiation technology The technology

provides a rapid and efficient option for sludge treatment in isolated conditions such as slum emergency and similar situations The microwave based technology forms part of the eSOS emergency sanitation operation system concept that promotes an integrated sanitation approach in which all components of the entire sanitation chain are planned holistically Besides the study addresses the deficiencies associated with the poor choice of emergency sanitation technology options by proposing a methodology that is based on compensatory multi criteria analysis This study contributes in providing solutions towards improved sanitation in complex scenarios especially the management of faecal sludge in emergency and slum conditions
