Cultures of Fear Uli Linke, Danielle Taana Smith, 2009-10-09 This collection of essays explores the formation and normalisation of fear in the context of war and terrorism Freedom from fear is a universal right and fundamental for human well being People often look to governments humanitarian agencies and other institutions to further this aim However this book shows that these organisations often use the same logic of fear to monitor control and contain human beings in zones of violence This is an excellent interdisciplinary reader for students of anthropology sociology and politics Contributors include Noam Chomsky Slavoj Zizek Jean Baudrillard Catharine MacKinnon Neil Smith Cynthia Enloe David L Altheide Cynthia Cockburn and Carolyn Nordstrum *Helping Children Learn Mathematics* Robert Reys, Mary Lindquist, Diana V.

Geophysics: A Journey into the Twentieth Century R.J. Howarth, 2024-12-02 How did geophysics begin Who were the pioneers of this new science What instruments did they devise to measure the Earth related phenomena they were interested in This Memoir attempts to answer such questions in a well illustrated and largely non technical account The seventeenth century saw magnetism used as an aid to prospecting for iron ore in Sweden and Isaac Newton's derivation of the law of gravitational attraction A gradually increasing interest in physics of the Earth brought forth the new discipline of geophysics in the early nineteenth century and by the end of the following century airborne and satellite based investigations had become routine The Emergence of Geophysics explores this evolution in several parallel strands terrestrial magnetism and electricity gravity seismicity heat geodynamics and radioactivity broadly reflecting the timing of their introduction as tools

aiding geophysical studies Biographical information is included for many of its practitioners and the book should be of interest to both geophysicists and to anyone interested in the history of Earth science **Graphics Recognition:**

that contributed by proposing solutions to some of the questions or by presenting results of the speaker's work Each session was then concluded by a panel discussion **On Board**, 2007 *Ethnomathematics of Negev Bedouins' Existence in Forms, Symbols and Geometric Patterns* Ada Katsap, Fredrick L. Silverman, 2015-12-17 Ethnomathematics of Negev Bedouins Existence in Forms Symbols and Geometric Patterns provokes a journey into the world of Negev Bedouins and attests to the beauty and sophistication of mathematics that occurs naturally in their craftwork structures games and throughout Bedouin life The major focus is Bedouin women's traditional craftwork by which they reflect social and cultural activities in their weaving embroidery and similar pursuits Their creations reveal mathematical ideas incorporated in embroidery compositions in repeated patterns of flowers and geometric figures in varying scales The women use ground-staked looms stabilized by block stones to make multi-color repeating pattern strip rugs in a process practiced for generations An image of this appears in the book's cover photo collage Bedouin men construct dwellings tents desert wells and such They and their children play games attuned to sand and other specific desert conditions These activities of Bedouin women men and children require mathematical thinking and strategic reasoning to achieve desired outcomes The book opens with a narrative of Bedouin history followed by a brief overview of ethnomathematics and concludes with discussion about bridging the gap between school mathematics experiences and those outside school It considers mathematically problematic situations embedded in Bedouin sociocultural heritage likely to appeal to teachers for use with school students The book is intended for a diverse

audience from Bedouin communities in different countries to the general public and professionals including ethnomathematicians and mathematics educators Numerous photographs document the examples of Bedouin ethnomathematics They are the subject of considerable analysis and appear throughout the book

Implicit Curves and Surfaces: Mathematics, Data Structures and Algorithms Abel Gomes,Irina Voiculescu,Joaquim Jorge,Brian Wyvill,Callum Galbraith,2009-05-12 Implicit objects have gained increasing importance in geometric modeling visualisation animation and computer graphics because their geometric properties provide a good alternative to traditional parametric objects This book presents the mathematics computational methods and data structures as well as the algorithms needed to render implicit curves and surfaces and shows how implicit objects can easily describe smooth intricate and articulatable shapes and hence why they are being increasingly used in graphical applications Divided into two parts the first introduces the mathematics of implicit curves and surfaces as well as the data structures suited to store their sampled or discrete approximations and the second deals with different computational methods for sampling implicit curves and surfaces with particular reference to how these are applied to functions in 2D and 3D spaces

Network Bioscience, 2nd Edition Marco Pellegrini,Marco Antoniotti,Bud Mishra,2020-03-27 Network science has accelerated a deep and successful trend in research that influences a range of disciplines like mathematics graph theory physics statistics data science and computer science just to name a few and adapts the relevant techniques and insights to address relevant but disparate social biological technological questions We are now in an era of big biological data supported by cost effective high throughput genomic transcriptomic proteomic metabolomic data collection techniques that allow one to take snapshots of the cells molecular profiles in a systematic fashion Moreover recently also phenotypic data data on diseases symptoms patients etc are being collected at nation wide level thus giving us another source of highly related causal big data This wealth of data is usually modeled as networks aka binary relations graphs or webs of interactions including protein protein metabolic signaling and transcription regulatory interactions The network model is a key view point leading to the uncovering of mesoscale phenomena thus providing an essential bridge between the observable phenotypes and omics underlying mechanisms Moreover network analysis is a powerful hypothesis generation tool guiding the scientific cycle of data gathering data interpretation hypothesis generation and hypothesis testing A major challenge in contemporary research is the synthesis of deep insights coming from network science with the wealth of data often noisy contradictory incomplete and difficult to replicate so to answer meaningful biological questions in a quantifiable way using static and dynamic properties of biological networks
