Ib Biology Paper 3 2011:

Researching Biology and Evolution in the Gulf States Jörg Matthias Determann, 2015-08-25 Officials and religious scholars in the Gulf states have repeatedly banned the teaching of the theory of evolution because of its association with atheism But Jörg Matthias Determann argues here that despite official prohibition research on biological evolution has flourished due in large part to the development of academic and professional networks This book traces these networks through the history of various branches of biology including botany conservation research ornithology and palaeontology Typical of rentier societies some of the scientific networks in this region consist of vertical patron client relationships For example those in power who are interested in wildlife conservation have been known to offer patronage to biologists working on desert ecology However just as important are the horizontal links between scientists both within the Gulf region and beyond Given the strengths and importance of these two forms of professional networks Determann argues that we should look at the Arab world as an area interconnected with global science and therefore fully integrated into the scientific and technological advances being pioneered worldwide

Genomics in Aquaculture to Better Understand Species Biology and Accelerate Genetic Progress José Manuel Yáñez, Ross Houston, Scott

Newman, 2016-09-15 From a global perspective aquaculture is an activity related to food production with large potential for growth Considering a continuously growing population the efficiency and sustainability of this activity will be crucial to meet the needs of protein for human consumption in the near future However for continuous enhancement of the culture of both fish and shellfish there are still challenges to overcome mostly related to the biology of the cultured species and their interaction with increasingly changing environmental factors Examples of these challenges include early sexual maturation

feed meal replacement immune response to infectious diseases and parasites and temperature and salinity tolerance. Moreover, it is estimated that less than 10% of the total aquaculture production in the world is based on populations genetically improved by means of artificial selection. Thus, there is considerable room for implementing breeding schemes aimed at improving productive traits having significant economic impact. By far, the most economically relevant trait is growth rate, which can be efficiently improved by conventional genetic selection, i.e. based on breeding values of selection candidates. However, there are other important traits that cannot be measured directly on selection candidates, such as resistance against infectious and parasitic agents and carcass quality traits, e.g. fillet yield and meat color. However, these traits can be more efficiently improved using molecular tools to assist breeding programs by means of marker-assisted selection using a few markers explaining a high proportion of the trait variation or genomic selection using thousands of markers to estimate genomic breeding values. The development and implementation of new technologies applied to molecular biology and genomics, such as next-generation sequencing methods and high-throughput genotyping platforms, are allowing the rapid increase of availability of genomic resources in aquaculture species. These resources will provide powerful tools to the research community and will aid in the determination of the genetic factors involved in several biological aspects of aquaculture species. In this regard, it is important to establish discussion in terms of which strategies will be more efficient to solve the primary challenges that are affecting aquaculture systems around the world. The main objective of this Research Topic is to provide a forum to communicate recent research and implementation strategies in the use of genomics in aquaculture species, with emphasis on 1) a better understanding of fish and shellfish biological processes having considerable impact on aquaculture systems and 2) the efficient incorporation of molecular information into breeding programs to accelerate genetic progress of economically relevant traits.

[Making Classrooms Better: 50 Practical Applications of Mind, Brain, and Education Science](#) Tracey Tokuhama-Espinosa, 2014-04-28. This book goes beyond neuroscience explanations of learning to demonstrate exactly what works in the classroom and why. Lessons from mind, brain, and education science are put into practice using students as a lab to test these theories. Strategies and approaches for doing so and a general list of best practices will guide and serve teachers, administrators, and parents. Provided by publisher.

[Biology of Sharks and Their Relatives, Second Edition](#) Jeffrey C. Carrier, John A. Musick, Michael R. Heithaus, 2012-04-09. Virtually every area of research associated with sharks and their relatives has been strongly impacted by the revolutionary growth in technology. The questions we can now ask are very different than those reported even two decades ago. Modern immunological and genetic techniques, satellite telemetry, and archival tagging, modern phylogenetic analysis, GIS, and bomb dating are just a few of the techniques and procedures that have become a part of our investigative lexicon. A modern synthesis of the biology of Chondrichthyans. *Biology of Sharks and Their Relatives, Second Edition* discusses significant advances in the development and application of new molecular techniques to the understanding of the phylogenetic relationships among and between

these groups The book considers the effect of global changes on the status of sharks and their relatives and how advances in technology and analytical techniques have changed not only how we approach problem solving and scientific investigations but how we formulate questions The book also introduces applications of new and novel laboratory devices techniques and field instruments This second edition of the award winning and groundbreaking original exploration of the fundamental elements of the taxonomy systematics physiology and ecology of sharks skates rays and chimera presents cohesive and integrated coverage of key topics and discusses technological advances used in modern shark research Offering a well rounded picture for students and researchers and far above competitors in scope and research this new volume holds a wealth of data on the current status of Chondrichthyan research and provides the basis and springboard for original research Cover photo by Justin Gilligan *Trends in Biophysics* Pavel Kraikivski, 2013-04-12 This title includes a number of Open Access chapters This book covers a wide scope of biological approaches to such biological phenomena as cell division motility collective cell behavior multicellular structures morphogenesis and tumor development Over the past two decades biologists have generated large sets of experimental data and discov *The Fractal Geometry of the Brain* Antonio Di Ieva, 2024-03-12 The new edition of the highly popular *The Fractal Geometry of the Brain* reviews the most intriguing applications of fractal analysis in neuroscience with a focus on current and future potential limits advantages and disadvantages It brings an understanding of fractals to clinicians and researchers even if they do not have a mathematical background and it serves as a valuable tool for teaching the translational applications of computational fractal based models to both students and scholars As a consequence of the novel research developed at Professor Di Ieva's laboratory and other centers around the world the second edition will explore the use of computational fractal based analysis in many clinical disciplines and different fields of research including neurology and neurosurgery neuroanatomy and psychology magnetoencephalography MEG eye tracking devices for the fractal computational characterization of scanpaths deep learning in image analysis radiomics for the characterization of brain MRIs characterization of neuropsychological and psychiatric diseases and traits signal complexity analysis in time series and functional MRI amongst others Recent Advances in $\gamma\delta$ T Cell Biology: New Ligands, New Functions, and New Translational Perspectives Dieter Kabelitz, Julie Dechanet-Merville, 2016-02-16 Gamma delta T cells are a small subset of T lymphocytes in the peripheral circulation but constitute a major T cell population at other anatomical localizations such as the epithelial tissues In contrast to conventional T cells the available number of germline genes coding for T cell receptor TCR variable elements of T cells is very small Moreover there is a preferential localization of T cells expressing given Vgamma and Vdelta genes in certain tissues In humans T cells expressing the Vg9Vd2 encoded TCR account for anywhere between 50 and 95% of peripheral blood T cells whereas cells expressing non Vd2 genes dominate in mucosal tissues In mice there is an ordered appearance of T cell waves during embryonic development resulting in preferential localization of T cells expressing distinct VgammaVdelta genes in the skin the reproductive organs or gut

epithelia The major function of T cells resides in local immunosurveillance and immune defense against infection and malignancy This is supported by the identification of ligands that are selectively recognized by the TCR As an example human Vgamma9Vdelta2 T cells recognize phosphorylated metabolites phosphoantigens that are secreted by many pathogens but can also be overproduced by tumor cells providing a basis for a role of these T cells in both anti infective and anti tumor immunity Similarly the recognition of endothelial protein C receptor by human non Vdelta2 T cells has recently been identified to provide a link for the role for such T cells in immunity against epithelial tumor cells and cytomegalovirus infected endothelial cells In addition to classical functions such as cytokine production and cytotoxicity recent studies suggest that subsets of T cells can exert additional functions such as regulatory activity and quite surprisingly professional antigen presenting capacity It is currently not well known how this tremendous extent of functional plasticity is regulated and what is the extent of TCR ligand diversity Due to their non MHC restricted recognition of unusual stress associated ligands T cells have raised great interest as to their potential translational application in cell based immunotherapy Topics of this Research Focus include Molecular insights into the activation and differentiation requirements of T cells role of pyrophosphates and butyrophilin molecules for the activation of human T cells role of T cells in tumor immunity and in other infectious and non infectious diseases and many others We are most grateful to all colleagues who agreed to write a manuscript Thanks to their contributions this E book presents an up to date overview on many facets of the still exciting T cells Dieter Kabelitz Julie D chanet Merville Staying with the Trouble Donna J. Haraway, 2016-08-25 In the midst of spiraling ecological devastation multispecies feminist theorist Donna J Haraway offers provocative new ways to reconfigure our relations to the earth and all its inhabitants She eschews referring to our current epoch as the Anthropocene preferring to conceptualize it as what she calls the Chthulucene as it more aptly and fully describes our epoch as one in which the human and nonhuman are inextricably linked in tentacular practices The Chthulucene Haraway explains requires sym poiesis or making with rather than auto poiesis or self making Learning to stay with the trouble of living and dying together on a damaged earth will prove more conducive to the kind of thinking that would provide the means to building more livable futures Theoretically and methodologically driven by the signifier SF string figures science fact science fiction speculative feminism speculative fabulation so far Staying with the Trouble further cements Haraway s reputation as one of the most daring and original thinkers of our time
