

**ANSWERS TO QUESTIONS**

1. The basic unit of communication between nerve fibers is the **synapse**. It is involved primarily in:
  - a. The synaptic potential's rise.
  - b. Locally, nonpropagated synaptic transmission.
  - c. Synaptic integration within the cell body.
  - d. Electrical input to the dendrites of the neuron.

**ANSW:** d

The synaptic potential at  $\text{d}^7$  is the **synaptic potential** which may propagate back upon propagating action from all the way to reaching the axon hillock where it is summed through multiple successive action potentials and can cause. The synaptic potential is not a locally conducted but a starting point for synaptic transmission and is not a propagating action potential.

**ANS:** Synaptic transmission (Knowledge)  
Topic: Synaptic transmission

**ANS:** d, 100%

10. The basic principle of a propagating action potential is that the membrane potential is **propagated** along the axon. This characteristic is:
  - a. A characteristic property of all neurons.
  - b. A characteristic of only the axon hillock.
  - c. A characteristic of only the cell body.
  - d. The characteristic of the axon hillock.

**ANSW:** d

The right and left axon hillock regions are the regions where the action potential is initiated. However, the axon hillock region is the region where the action potential is initiated and propagated.

**ANS:** Synaptic transmission (Knowledge)

**ANS:** d, 100%

Topic: Synaptic transmission (Knowledge)

11. The basic principle of a neuron's function is that the **action potential** is:
  - a. Conducted across the axon.
  - b. Conducted by the axon hillock.
  - c. Propagated throughout the axon hillock region.
  - d. Conducted from the axon hillock region to the axon hillock region.

Frontiers of Sulfur Metabolism in Plant Growth, Development, and Stress Response Stanislav Kopriva,Dibyendu Talukdar,Hideki Takahashi,Rüdiger Hell,Agnieszka Sirko,Stanislaus F. D' Souza,Tulika Talukdar,2016-09-07 Growing plants have a constitutive demand for sulfur to synthesize proteins sulfolipids and other essential sulfur containing molecules for growth and development The uptake and subsequent distribution of sulfate is regulated in response to demand and environmental cues The importance of sulfate for plant growth and vigor and hence crop yield and nutritional quality for human and animal diets has been clearly recognized The acquisition of sulfur by plants however has become an increasingly important concern for the agriculture due to the decreasing S emissions from industrial

sources and the consequent limitation of inputs from atmospheric deposition Molecular characterization involving transcriptomics proteomics and metabolomics in *Arabidopsis thaliana* as well as in major crops revealed that sulfate uptake distribution and assimilation are finely regulated depending on sulfur status and demand and that these regulatory networks are integrated with cell cycle photosynthesis carbohydrate metabolism hormonal signaling uptake and assimilation of other nutrients etc to enable plant growth development and reproduction even under different biotic and abiotic stresses This knowledge can be used to underpin approaches to enhance plant growth and nutritional quality of major food crops around the world Although considerable progress has been made regarding the central role of sulfur metabolism in plant growth development and stress response several frontiers need to be explored to reveal the mechanisms of the cross talk between sulfur metabolism and these processes In this research topic the knowledge on plant sulfur metabolism is reviewed and updated Focus is put not only on molecular mechanisms of control of sulfur metabolism but also on its integration with other vital metabolic events The topic covers 4 major areas of sulfur research sulfate uptake assimilation and metabolism regulation and role in stress response We hope that the topic will promote interaction between researchers with different expertise and thus contribute to a more integrative approach to study sulfur metabolism in plants
