John Phillips,1942 Control Loop Foundation Terrence L. Blevins,Mark Nixon,2011 In this in depth book the authors
address the concepts and terminology that are needed to work in the field of process control The material is presented in a
straightforward manner that is independent of the control system manufacturer It is assumed that the reader may not have
worked in a process plant environment and may be unfamiliar with the field devices and control systems Much of the
material on the practical aspects of control design and process applications is based on the authors personal experience
gained in working with process control systems Thus the book is written to act as a guide for engineers managers technicians
and others that are new to process control or experienced control engineers who are unfamiliar with multi loop control
techniques After the traditional single loop and multi loop techniques that are most often used in industry are covered a brief
introduction to advanced control techniques is provided Whether the reader of this book is working as a process control
engineer working in a control group or working in an instrument department the information will set the solid foundation
needed to understand and work with existing control systems or to design new control applications At various points in the
chapters on process characterization and control design the reader has an opportunity to apply what was learned using web
based workshops The only items required to access these workshops are a high speed Internet connection and a web browser
Dynamic process simulations are built into the workshops to give the reader a realistic hands on experience Also one chapter
of the book is dedicated to techniques that may be used to create process simulations using tools that are commonly available
