**Managing Information Security** James T. Harmening, 2013-08-21 Today when most companies and government agencies rely on computer networks to store and manage their organizations data it is essential that measures are put in place to secure those networks and keep them functioning optimally Network administrators need to define their security management systems to cover all parts of their computer and network resources With a plethora of storage devices including iPads Android Tablets

USB drives watches televisions Digital Video Recorders smart phones apple T V appliances Xbox s and household appliances the management becomes even more difficult This chapter focuses on security management systems Which are sets of policies put place by an organization to maintain the security of their computer and network resources These policies are based on the types of resources that need to be secured and they depend on the organization Some groups of policies can be applied to entire industries others are specific to an individual organization A security management system starts as a set of policies that dictate the way in which computer resources can be used The policies are then implemented by the organization s technical departments and enforced This can be easy for smaller organizations but can require a team for larger international organizations that have thousands of business processes Either way measures need to be put in place to prevent respond to and fix security issues that arise in an organization Standards that were in place ten years ago may not be adequate for current business practices As an example a strong password may have included less than 8 characters while modern computers can easily break the password utilizing brute force or rainbow table methods

**Managing with Information Technology** Richard Ennals, Philip Molyneux, 2012-12-06 The language of business and management and of information technology is being employed across all sectors of economic and social activity In recent years computers and information technology IT in general have moved from being a scarce resource to being a more generally available commodity without a corresponding increase in understanding of how the new generation of tools can be used IT is available on individual desktops supporting decision making and communication but often conventional organizations have failed to adapt individuals lack competence and confidence and senior managers lack both the strategic insight to develop appropriate strategies and the humility to accept that they need to learn As each sector whether business education public sector management or the community and voluntary sector realizes that the potential of IT is not being exploited to the full calls are issued for the development of new hybrid managers a term coined to describe the gap in understanding and competence that is to be filled The two editors work in the hybrid field of business information technology which is a melting pot of ideas and experience from numerous traditional disciplines The pace of change is such that no one individual could ever be abreast of all technical and business developments but the field is now sufficiently mature for us to identify certain underlying issues and principles and areas of research for the coming years
