A Guide to Hydric Soils in the Mid-Atlantic Region - Version 2.0 U.S. Department of Agriculture, 2019-04-06

Identification of soils as hydric is critical to the protection of wetlands under the Clean Water Act (CWA) Federal Water Pollution Control Act 2008. According to the Corps of Engineers Wetlands Delineation Manual hereafter referred to as the Delineation Manual, Environmental Laboratory 1987, the presence

of a hydric soil is one of three factors that must be met in order for an area to meet the definition of a jurisdictional wetland. The other two are the presence of hydrophytic vegetation and wetland hydrology. The use of the Delineation Manual and Regional Supplements U S Army COE 2010 is required for all Federal agencies involved in identification of wetlands that may be jurisdictional as well as most states that have environmental programs to protect wetlands. The Delineation Manual generally is used on all lands not classified as agricultural lands. The National Food Security Act Manual USDA NRCS 2008 is used on agricultural lands.

A Guide to the Use and Calibration of Detector Array Equipment Gordon R.

Hopkinson, Teresa M. Goodman, Stuart R. Prince, 2004. The guide arose from a survey of UK users and manufacturers developers to assess detector equipment usage and calibration in order to identify the factors influencing the accuracy of measurements obtained with detector array equipment and thus develop calibration techniques and establish best practice procedures. The text contains both a review of the existing literature and a large amount of new experimental data obtained during the course of the study. The main emphasis has been on UV visible and near infrared systems that use silicon detector technology but the issues arising in thermal imaging with infrared detector arrays have also been addressed along with brief sections on EM CCDs for low light level imaging and on lag effects in CMOS active pixel sensors.
