OpenStat Reference Manual William Miller, 2012-11-29 This reference manual for the OpenStat software an open source software developed by William Miller covers a broad spectrum of statistical methods and techniques A unique feature is its compatibility with many other statistical programs OpenStat users are researchers and students in the social sciences education or psychology who benefit from the hands on approach to Statistics During and upon completion of courses in Statistics or measurement students and future researchers need a low cost computer program available to them and OpenStat fills this void The software is used in Statistics courses around the world with over 50 000 downloads per year The manual covers all functions of the OpenStat software including measurement ANOVAS regression analyses simulations product moment and partial correlations and logistic regression The manual is an important learning tool that explains the Statistics behind the many analyses possible with the program and demonstrates these analyses **Stata Reference Manual: A-G**, 1999 **Superelements User's Guide** MSC Software, 2012-03-30 *Maple V Library Reference Manual* Bruce W. Char, Keith O. Geddes, Gaston H. Gonnet, Benton L. Leong, Michael B. Monagan, Stephen Watt, 2013-12-01 The design and implementation of the Maple system is an on going project of the Symbolic Com putation Group at the University of Waterloo in Ontario Canada This manual corresponds with version V roman numeral five of the Maple system The on line help subsystem can be invoked from within a Maple session to view documentation on specific topics In particular the command updates points the user to documentation updates for each new version of Maple The Maple project was first conceived in the autumn of 1980 growing out of discussions on the state of symbolic computation at the University of Waterloo The authors wish to acknowledge many fruitful discussions with colleagues at the University of Waterloo particularly Morven Gen tleman Michael Malcolm and Frank Tompa It was recognized in these discussions that none of the locally available systems for symbolic computation provided the facilities that should be expected for symbolic computation in modern computing environments We concluded that since the basic design decisions for the then current symbolic systems such as ALTRAN CAMAL REDUCE and MACSYMA were based on 1960 s computing technology it would be wise to design a new system from scratch Thus we could take advantage of the software engineering technology which had become available in recent years as well as drawing from the lessons of experience Maple s basic features elementary data structures Input output arithmetic with numbers and elementary simplification are coded in a systems programming language for efficiency
