Knowledge Creation in Education Seng Chee Tan, Hyo Jeong So, Jennifer Yeo, 2014-06-12 This book arises from research conducted through Singapore's National Institute of Education on such topics as integrating knowledge building pedagogies into Singaporean classrooms with both students and teachers across school levels from primary schools to high schools. Additionally, international scholars contribute research on theories of knowledge creation, methodological foundations of research on knowledge creation, knowledge creation pedagogies in classrooms, and knowledge creation work involving educators. The book is organized in two sections. Section A focuses on theoretical, technological, and methodological issues where sources of justification for claims are predominantly theories and extant literature, although empirical evidence is used extensively in one chapter. Section B reports knowledge creation practices in schools with teachers, students, or both; the key sources of justification for claims are predominantly empirical evidence and narratives of experience. The editor asserts that schools should focus on developing students' capacity and disposition in knowledge creation work at the same time; leaders and teachers alike should continue to develop their professional knowledge as a community. In the knowledge building vernacular, the chapters are knowledge artifacts—artifacts that not only document the findings of the editors and authors but that also mediate future advancement in this area of research work. The ultimate aim of the book is to inspire new ideas and to illuminate the path for researchers of similar interest in knowledge creation in education. **Fossil Energy Update**, 1977

Computational Fluid Dynamics and Energy Modelling in Buildings Parham A. Mirzaei, 2023-01-24 COMPUTATIONAL FLUID DYNAMICS AND ENERGY MODELLING IN BUILDINGS: A Comprehensive Overview of the Fundamentals of Heat and Mass Transport Simulation and Energy Performance in Buildings. In the first part of *Computational Fluid Dynamics and Energy Modelling in Buildings: Fundamentals and Applications*, the author explains the fundamentals of fluid mechanics, thermodynamics, and heat transfer with a specific focus on their application in buildings. This background knowledge sets the scene to further model heat and mass transport in buildings with explanations of commonly applied simplifications and assumptions. In the second part, the author elaborates how the fundamentals explained in part 1 can be used to model energy flow in buildings, which is the basis of all commercial and educational building energy simulation tools. An innovative illustrative nodal network concept is introduced to help readers comprehend the basics of conservation laws in buildings. The application of numerical techniques to form dynamic simulation tools are then introduced. In general, understanding these techniques will help readers to identify and justify their choices when working with building energy simulation tools rather than using default settings. Detailed airflow information in buildings cannot be obtained in building energy simulation techniques. Therefore, part three is focused on introducing computational fluid dynamics (CFD) as a detailed modelling technique for airflow in buildings. This part starts with an introduction to the fundamentals of the finite volume method used to solve the governing fluid equations, and the related challenges and considerations are discussed. The last chapter of this

part covers the solutions to some practical problems of airflow within and around buildings The key aspect of Computational Fluid Dynamics and Energy Modelling in Buildings Fundamentals and Applications is that it is tailored for audiences without extensive past experience of numerical methods Undergraduate or graduate students in architecture urban planning geography architectural engineering and other engineering fields along with building performance and simulation professionals can use this book to gain additional clarity on the topics of building energy simulation and computational fluid dynamics **NBS Special Publication** ,1968 **Energy/environment** ,1977 **Energy Research Abstracts** ,1994-11

Numerical study of physico- chemical interactions for CO₂ sequestration and geothermal energy utilization in the Ordos Basin, China Hejuan Liu, 2014-11-10 In this dissertation three simulators i.e TOUGH2MP TOUGHREACT and FLAC3D were used to simulate the complex physical and chemical interactions induced by CO₂ sequestration The simulations were done instages ranging from the two phase water and CO₂ fluid flow H₂ through coupled hydro mechanical effects H₂M and geochemical responses i.e CO₂ water rock interactions H₂C to the extension of CCS to CCUS by the application of combined geothermal production and CO₂ sequestration technologies The findings of this study are essential for a thorough understanding of the complex interactions in the multiphase multicomponent porous media controlled by different physical and chemical mechanisms Furthermore the simulation results will provide an invaluable reference for field operations in CCS projects especially for the full integration pilot scale CCS project launched in the Ordos Basin Subsequently a preliminary site selection scheme for the combined geothermal production and CO₂ sequestration was set up which considered various factors involved in site selection ranging from safety economical environmental and technical issues This work provides an important framework for the combined geothermal production and CO₂ sequestration project However further numerical and field studies are still needed to improve on a series of criteria and related parameters necessary for a better understanding of the technology Introduction to Architectural Science Steven Szokolay, 2014-04-11 Now in its third edition this book provides the ideal and only reference to the physical basis of architectural design Fully updated and expanded throughout the book provides the data required for architects to design buildings that will maintain the users comfort in a variety of conditions with minimal reliance on energy intensive methods like air conditioning This is not a how to book but answers the question why It equips the reader with the tools to realize the full potential of the good intentions of sustainable bioclimatic design All sections have been revised and updated for this third edition including all the most relevant developments affecting heat light and sound controls The book responds to the need of understanding beyond rules of thumb

Energy Forms Changes Simulation Answer Key: Bestsellers in 2023 The year 2023 has witnessed a remarkable surge in literary brilliance, with numerous captivating novels captivating the hearts of readers worldwide. Lets delve into the realm of popular books, exploring the captivating narratives that have captivated audiences this year. Energy Forms Changes Simulation Answer Key : Colleen Hoover's "It Ends with Us" This heartfelt tale of love, loss, and resilience has captivated readers with its raw and emotional exploration of domestic abuse. Hoover masterfully weaves a story of hope and healing, reminding us that even in the darkest of times, the human spirit can prevail. Uncover the Best : Taylor Jenkins Reids "The Seven Husbands of Evelyn Hugo" This intriguing historical fiction novel unravels the life of Evelyn Hugo, a Hollywood icon who defies expectations and societal norms to pursue her dreams. Reids absorbing storytelling and compelling characters transport readers to a bygone era, immersing them in a world of glamour, ambition, and self-discovery. Discover the Magic : Delia Owens "Where the Crawdads Sing" This evocative coming-of-age story follows Kya Clark, a young woman who grows up alone in the marshes of North Carolina. Owens crafts a tale of resilience, survival, and the transformative power of nature, captivating readers with its evocative prose and mesmerizing setting. These bestselling novels represent just a fraction of the literary treasures that have emerged in 2023. Whether you seek tales of romance, adventure, or personal growth, the world of literature offers an abundance of engaging stories waiting to be discovered. The novel begins with Richard Papen, a bright but troubled young man, arriving at Hampden College. Richard is immediately drawn to the group of students who call themselves the Classics Club. The club is led by Henry Winter, a brilliant and charismatic young man. Henry is obsessed with Greek mythology and philosophy, and he quickly draws Richard into his world. The other members of the Classics Club are equally as fascinating. Bunny Corcoran is a wealthy and spoiled young man who is always looking for a good time. Charles Tavis is a quiet and reserved young man who is deeply in love with Henry. Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. Morrow is a complex and mysterious figure, and he seems to be manipulating the students for his own purposes. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts. The Secret History is a brilliant and gripping novel that will keep you wondering until the very end. The novel is a warning tale about the dangers of obsession and the power of evil.
