

Parabola

A U-shaped curve, created by a quadratic equation

Let's analyze the key features presented in the graph of $f(x) = -x^2 + 3x + 4$

Axis of Symmetry

A vertical line that passes through the middle of the parabola is called the axis of symmetry. The two sides of the parabola are symmetrical when split down this line. For quadratic functions, the axis of symmetry will be a vertical line where x equals some number. The variables a and b are pulled directly from the standard form of the quadratic function.

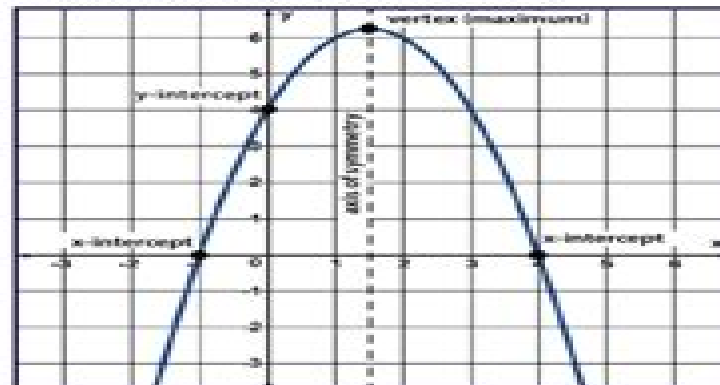

For $f(x) = -x^2 + 3x + 4$, $a = -1$ and $b = 3$. Let's substitute the values into the formula for the axis of symmetry.

$$x = \frac{-b}{2a} \quad x = \frac{-b}{2a} = \frac{-(3)}{2(-1)} = \frac{-3}{-2} = \frac{3}{2}$$

$$x = 1.5 \quad x = 1.5$$

Parabola 15:02

This is what our graph will look like:

Vertex

The point where the axis of symmetry and the quadratic function meet is called the vertex. The vertex is the highest point of a downward-opening parabola and the lowest point of an upward-opening parabola. If
